Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

PREFACE

This Standard was prepared by the Standards Australia Committee BD-074, Termite Management, to supersede AS 3660.1—2000.

This Standard incorporates Amendment No. 1 (September 2017). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to provide builders, building designers, regulatory authorities, termite management system manufacturers and installers, and those people requiring termite management systems, with methods of termite management for implementation during construction of new building work.

The objective of this revision is to update the Standard to reflect current needs and practices for termite management in new buildings and new building work.

This Standard is part of a series on termite management, as follows:

AS

3660 Termite management

3660.1 Part 1: New building work (this Standard)

3660.2 Part 2: In and around existing buildings and structures—Guidelines

3660.3 Part 3: Assessment criteria for termite management systems

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.
