Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting **www.standards.org.au**

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at **mail@standards.org.au**, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee SF-037, Work in Confined Spaces to supersede AS/NZS 2865:2001, *Safe working in a confined space*. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

This Standard outlines the minimum requirements for establishing a safe system for entry and the conduct of tasks in or on a confined space. These requirements are consistent with industry best practice and are considered mandatory for reducing the risks associated with confined spaces and for establishing safe entry to them. Mandatory requirements of this Standard are highlighted in bold type and contained in boxes.

The purpose of this Standard is to provide safety requirements and procedures for persons entering and conducting tasks in a confined space. It is intended to ensure that confined spaces are made safe for those entering them, and to highlight the likely hazards associated with such spaces and the relevant risk control measures necessary to deal with these hazards.

This Standard emphasizes responsibilities for safety and sets out steps that need to be taken to eliminate or control risks that may arise during confined space operations. It also requires that all persons involved in the entry of a confined space be trained, assessed as competent, and instructed on the nature of the hazards and the risk control measures to be followed.

Significant revisions in this edition of the Standard are as follows:

- (a) The criteria that constitute a confined space have been clarified in the definition.
- (b) Guidance diagrams have been provided for identifying a confined space.
- (c) Recommendations for training and competency have been introduced.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.
