AS/NZS 3010:2017 (Incorporating Amendment No. 1)

## Australian/New Zealand Standard™

# **Electrical installations—Generating sets**

#### AS/NZS 3010:2017

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-001, Wiring Rules. It was approved on behalf of the Council of Standards Australia on 13 March 2017 and by the New Zealand Standards Approval Board on 5 April 2017.

This Standard was published on 8 May 2017.

The following are represented on Committee EL-001:

Australian Building Codes Board Australian Industry Group Communications, Electrical and Plumbing Union-Electrical Division Consumers Federation of Australia Electrical Contractors Association of New Zealand **Electrical Regulatory Authorities Council** Electrical Safety Organisation, New Zealand ElectroComms and Energy Utilities Industries Skills Council Energy Networks Association **Engineers** Australia Institute of Electrical Inspectors Master Electricians Australia Ministry of Business, Innovation and Employment, New Zealand National Electrical and Communications Association National Electrical Switchboard Manufacturers Association New Zealand Council of Elders New Zealand Electrical Institute New Zealand Manufacturers and Exporters Association

#### Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Site at www.standards.org.au or Standards New Zealand web site at www.standards.govt.nz and looking up the relevant Standard in the online catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of Standards Australia or the New Zealand Standards Executive at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 3010:2015.

#### PREFACE

This Standard was prepared by the joint Standards Australia/Standards New Zealand Committee EL-001, Wiring Rules, to supersede AS/NZS 3010:2005 and AS 2790—1989.

This Standard incorporates Amendment No. 1 (April 2020). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to set out the minimum safety requirements related to the use of generating sets for the supply of electricity at voltages normally exceeding 50 V a.c. or 120 V d.c.

This Standard differs from AS/NZS 3010:2005 as follows:

- (a) Inclusion of several new figures showing a variety of generator connection methods which are acceptable and conform with the requirements of this Standard.
- (b) The modification of existing figures to show clearly the intent of the associated clauses, especially in relation to main switches.
- (c) The inclusion of some updated provisions of AS 2790 as a normative Appendix of this document (see Appendix D).
- (d) Inclusion of an exception in relation to the mechanical interlock requirements of the changeover device.
- (e) Inclusion of additional definitions, e.g. safety services and essential services.
- (f) General reinforcement of the MEN connection requirements.
- (g) Clarification of when switching of the neutral conductor is or is not permitted.
- (h) Clauses added in relation to carrying out additions, alterations and repairs in line with AS/NZS 3000.
- (i) Clauses added to clarify the use of three and four pole changeover devices.
- (j) Requirements of AS/NZS 3000 where not amended or changed by this Standard included within the Figures, e.g. mechanical maintenance isolating devices.

Any requirements that may be applicable in Australia only or New Zealand only are indicated in the text and by a symbol in the right margin as follows:

'In Australia.....'

'In New Zealand.....'

Statements expressed in mandatory terms in notes to Figures and Tables are deemed to be requirements of this Standard.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendices to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.
