I.S. EN 14033-1:2017

Railway applications - Track - Railbound construction and maintenance machines - Part 1: Technical requirements for running

I.S. EN 14033-1:2017

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

This document is based on:

EN 14033-1:2017

National Foreword

I.S. EN 14033-1:2017 is the adopted Irish version of the European Document EN 14033-1:2017, Railway applications - Track - Railbound construction and maintenance machines - Part 1: Technical requirements for running

This document does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

For relationships with other publications refer to the NSAI web store.

Compliance with this document does not of itself confer immunity from legal obligations.

In line with international standards practice the decimal point is shown as a comma (,) throughout this document.

NORME EUROPÉENNE

EUROPÄISCHE NORM

May 2017

ICS 45.120; 93.100

Supersedes EN 14033-1:2011

English Version

Railway applications - Track - Railbound construction and maintenance machines - Part 1: Technical requirements for running

Applications ferroviaires - Voie - Machines de construction et de maintenance empruntant exclusivement les voies ferrées - Partie 1 : Prescriptions techniques pour la circulation

Bahnanwendungen - Oberbau - Schienengebundene Bau- und Instandhaltungsmaschinen - Teil 1: Technische Anforderungen an das Fahren

This European Standard was approved by CEN on 2 October 2016.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 14033-1:2017) has been prepared by Technical Committee CEN/TC 256 “Railway applications”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2017, and conflicting national standards shall be withdrawn at the latest by November 2017.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 14033-1:2011.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive 2008/57/EC.

For relationship with EU Directive 2008/57/EC, see informative Annex ZA, which is an integral part of this document.

This series of standards EN 14033, *Railway applications — Track — Railbound construction and maintenance machines*, consists of the following parts:

- *Part 1: Technical requirements for running;*
- *Part 2: Technical requirements for travelling and working;*
- *Part 3: General safety requirements.*

Amended clauses compared to EN 14033-1:2011:

General	All references updated to latest issue
3.3	Inspection vehicles recognized as an additional type of railbound machine
3.8 to 3.10	Different modes of machine defined
4.2	New section on demountable modules added
5.1	Requirement for reference profile to be marked
5.2.5	Additional requirements for prevention of operation of locks in running mode
6.1	Clarification added concerning machine attachments and when fatigue calculations are required
6.3	Recognition that stowage hooks also used for towing
7.2	New requirements for structural design of bogies added
7.6	Wheelsets required to comply with ENs and dimensions mandated
7.7	New section on machine mass measurement added
7.9	Requirements for when lifeguards fitted and design forces reduced
7.10	New section on obstacle deflectors aligned with requirements of TSI

EN 14033-1:2017 (E)

Clause 8	Running safety section amended to align with latest edition of EN 14363
Clause 9	Brakes section extensively modified to align with requirements of emerging ENs and TSI, and to clarify testing
Clause 10	Alternative buffing and drawgear now permitted and requirements added
10.5	Marking of machine required where Berne rectangle not achieved
10.6 & 10.7	Clarity added when shunters handrail and step required
11.1	Dimensions of machine for operation of track machine aligned with requirements of TSI
11.3	Requirements for hot axle box detection aligned with requirements of EN 15437-1
11.4	New section on on-board hot box detection added
11.5	New section on other signalling systems added
12.2	Requirements for data recorder aligned with requirements of EN 62625-1
Clause 13	Section on warning horns and lights amended to align with requirements of TSI
14.2.2	Position of handrails no longer mandated, handrails to comply with EN 14033-3
14.2.3	Section on doorways amended to align with requirements of TSI
14.3.4	All forward facing windows now windscreens but reduced requirements from EN 15152 to only certain clauses
14.3.5	Reduced requirements for side windows and other glazing now included
14.6	Area of visibility requirements relaxed
14.8	Section on controls and indicators amended to align with requirements of TSI
14.10.1	Requirements for sanding and brake gauges added
14.10.4	Requirement for storage of tools added
14.11	New section on driver's vigilance device added
15.3	Section on fire precaution amended to align with requirements of TSI
15.4	New requirement for front end to be yellow added
16.1	New requirement to demonstrate compliance to environmental conditions where there is no previous experience
16.3	Requirements for fuel tank amended
Clause 17	New section on aerodynamic effects added
Clause 18	New section on design for recovery added
Clause 19	Requirements for machine marking aligned with EN 15877-2 and use of identification plate de-mandated
Clause 20	User information extensively amended and incorporates requirements in former Annexes G and I
Annexes	All annexes reviewed and updated
Annexes E and F	Now Informative
Annex H	Now Normative

Annex J	New annex giving clause-by-clause comparison with Loc&Pas TSI
---------	---

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

EN 14033-1:2017 (E)

Introduction

This European Standard was prepared to meet the essential requirements of EU Directives to facilitate an open market for goods and services.

This document is the first of a series of three parts of the European Standard: *Railway applications — Track — Railbound construction and maintenance machines*:

- Part 1 covers the safety and technical requirements for the machines in running mode; this is a harmonized standard with the Technical Specification for Interoperability (TSI) for Locomotives and Passenger Rolling Stock Commission decision 2011/291/EU, which itself meets the essential requirements to ensure the interoperability of the rail system as described in Article 1 of European Directive 2008/57/EC;
- Part 2 covers the railway specific requirements for the machines in working and travelling modes;
- Part 3 covers the safety requirements for the machines in working and travelling modes; this is a harmonized standard with the European Machinery Directive 2006/42/EC.

The risks that exist in all mechanical, electrical, hydraulic, pneumatic and other components of machines and which are dealt with in the relevant European Standards are not within the scope of this European Standard. Where necessary, references are made to appropriate standards of this type.

1 Scope

This European Standard defines the specific technical railway requirements for running of machines and other vehicles used for construction, maintenance and inspection of track, structures, track formation and fixed electric traction equipment. Special national conditions applicable to specific member states are shown in Annex B.

This European Standard applies to all railbound machines and other vehicles – referred to as machines – running exclusively on the railway (utilizing adhesion between the rail and wheels) and used for construction, maintenance and inspection of track, structures, infrastructure and fixed electric traction equipment.

This European Standard applies to machines that are intended to operate signalling and control systems. Other machines are dealt with in other European Standards, see Annex I.

This European Standard is written for 1 435 mm nominal track gauge; special requirements can apply for running on infrastructures with narrow gauge or broad gauge lines, urban railways, railways utilizing other than adhesion between the rail and wheels and road-rail machines which are not included in this standard.

This European Standard covers the railway specific requirements for movements of the machine as a train and movements to reach work sites.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
