

Irish Standard I.S. EN 13126-16:2019

Building hardware - Hardware for windows and door height windows -Requirements and test methods - Part 16: Hardware for Lift and Slide windows

 $\ensuremath{\mathbb C}$ CEN 2019 $\hfill No copying without NSAI permission except as permitted by copyright law.$

I.S. EN 13126-16:2019

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard – national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWIFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

This document is based on: EN 13126-16:2019 *Published:* 2019-04-17

National Foreword

I.S. EN 13126-16:2019 is the adopted Irish version of the European Document EN 13126-16:2019, Building hardware - Hardware for windows and door height windows - Requirements and test methods - Part 16: Hardware for Lift and Slide windows

This document does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

For relationships with other publications refer to the NSAI web store.

Compliance with this document does not of itself confer immunity from legal obligations.

In line with international standards practice the decimal point is shown as a comma (,) throughout this document.

EUROPEAN STANDARD NORME EUROPÉENNE

EN 13126-16

EUROPÄISCHE NORM

April 2019

ICS 91.190

Supersedes EN 13126-16:2008

English Version

Building hardware - Hardware for windows and door height windows - Requirements and test methods - Part 16: Hardware for Lift and Slide windows

Quincaillerie pour le bâtiment - Ferrures de fenêtres et portes-fenêtres - Exigences et méthodes d'essai - Partie 16 : Ferrures pour fenêtres coulissantes à levage Baubeschläge - Beschläge für Fenster und Fenstertüren - Anforderungen und Prüfverfahren - Teil 16: Beschläge für Hebeschiebe-Fenster und -Fenstertüren

This European Standard was approved by CEN on 8 March 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 13126-16:2019) has been prepared by Technical Committee CEN/TC 33 "Doors, windows, shutters, building hardware and curtain walling", the secretariat of which is held by AFNOR.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2019, and conflicting national standards shall be withdrawn at the latest by October 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13126-16:2008.

With regard to EN 13126-16:2008, the following significant changes were made:

- EN 13126-16 now is independent from EN 13126-1; all necessary information is included without the need of any further information from EN 13126-1;
- several editorial changes in the wording for a better understanding;
- new terms and definitions added under 3.13 3.18;
- under 4.1 classification system changed completely; former digits 1 (Category of use), 4 (Fire resistance), 5 (Safety in use), 7 (Security) and 8 (Applicable part) deleted; former digit 2 changed into box 1 (Durability), former digit 3 changed into box 2 (Mass), former digit 6 changed into box 3 (Corrosion resistance) and former digit 9 changed into box 4 (Test sizes);
- under 4.2 new grades for the number of cycles defined; H1 (5 000), H2 (10 000) and H3 (20 000);
- under 4.5 test size changed from SW (sash width) 1 200 mm and SH (=sash height) 2 000 mm into new sizes SW (sash width) 1 440 mm and SH (=sash height) 2 400 mm;
- under 4.6 new example of classification added in accordance with the new classification system; 2
 alternative ways (table or alphanumerical) to show the classification defined;
- under Clause 6 "Test equipment and preparation for the test" additional information added for the test rig (6.1), the specimen (6.2) and the mounting of the specimen (6.3);
- under 6.2 "Specimen" the use of gaskets added in the description;
- under 7.2 "Procedure" new subclause 7.2.1 "General", 7.2.2 "Adjusting the test mass" and 7.2.3 "Lubrication and adjustment of hardware" added with additional information, mainly from the current version of part 1;
- under 7.3 "Durability test" procedure modified to ensure better correlation with the test procedure described in EN 1191:2012;
- under 8 new clause added regarding marking with information from the current version of EN 13126-1.

This European standard is one of a series of European standards for building hardware products for windows and door height windows. This European standard is independent of EN 13126-1.

EN 13126 consists of the following parts:

- Building hardware Hardware for windows and door height windows Requirements and test methods Part 1: Requirements common to all types of hardware;
- Building hardware Requirements and test methods for windows and doors height windows Part 2: Window fastener handles;
- Building hardware Hardware for windows and door-height windows Requirements and test methods Part 3: Handles, primarily for Tilt&Turn, Tilt-First and Turn-Only hardware;
- Building hardware Requirements and test methods for windows and doors height windows Part 4: Espagnolettes;
- Building hardware Hardware for windows and door height windows Requirements and test methods Part 5: Devices that restrict the opening of windows and door height windows;
- Building hardware Requirements and test methods for windows and doors height windows Part
 6: Variable geometry stay hinges (with or without a friction stay);
- Building hardware Requirements and test methods for windows and door height windows Part 7: Finger catches;
- Building hardware Hardware for windows and door height windows Part 8: Requirements and test methods for Tilt and Turn, Tilt-First and Turn-Only hardware;
- Building hardware Requirements and test methods for windows and door height windows Part 9: Hardware for horizontal and vertical pivot windows;
- Building hardware Requirements and test methods for windows and doors height windows Part 10: Arm-balancing systems;
- Building hardware Requirements and test methods for windows and doors height windows Part 11: Top hung projecting reversible hardware;
- Building hardware Requirements and test methods for windows and doors height windows Part 12: Side hung projecting reversible hardware;
- Building hardware Hardware for windows and balcony doors Requirements and test methods Part 13: Sash balances;
- Building hardware Hardware for windows and balcony doors Requirements and test methods Part 14: Sash fasteners;
- Building hardware Hardware for windows and doors height windows Requirements and test methods Part 15: Rollers for horizontal sliding and hardware for sliding folding windows;
- Building hardware Hardware for windows and doors height windows Requirements and test methods — Part 16: Hardware for Lift and Slide windows;

EN 13126-16:2019 (E)

- Building hardware Hardware for windows and doors height windows Requirements and test methods Part 17: Hardware for Tilt and Slide windows;
- Building hardware Requirements and test methods for windows and door height windows Part 19: Sliding Closing Devices.

The performance tests incorporated in this European standard are considered to be reproducible and as such will provide a consistent and objective assessment of the performance of these products throughout CEN Member States.

A full contribution to the preparation of this European standard has been made by the European manufacturer's organization 'ARGE' and National Standards institutions.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

1 Scope

This document specifies requirements and test methods for durability, strength, security and function of hardware for Lift and Slide windows and door height windows in accordance with common application as shown in Figures C.1 and C.2 in informative Annex C, regardless of whether the hardware enables an additional tilt position.

NOTE 1 This document is also applicable to hardware systems, whereby the sash itself is not lifted but a gasket mechanism is moved.

NOTE 2 This document is also applicable to hardware systems, whereby the sash itself is not lifted but the sash is being moved parallel to the plane of the frame.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 1670, Building hardware — Corrosion resistance — Requirements and test methods

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— IEC Electropedia: available at <u>http://www.electropedia.org/</u>

— ISO Online browsing platform: available at <u>http://www.iso.org/obp</u>

The following terms and definitions apply to hardware for Lift and Slide windows and door height windows made of timber, PVC-U, aluminium or steel and their appropriate material combinations.

3.1

roller

assembly of one or more rolls in a single or multiple casing which supports Lift and Slide windows and door height windows; these may be aligned in a straight line or rotate about an axis for Lift and Slide windows and door height windows (otherwise known as a bogey)

3.2

roll

singular wheel in a roller

3.3

lateral guide

hardware component which guides the lateral movement of the Lift and Slide windows and door height windows

3.4

guide track

track fixed on the top (top guide track) or bottom (bottom guide track) which enables a lateral guide to run
