Overhead electrical lines exceeding AC 1 kV - Part 2-2: National Normative Aspects (NNA) for Belgium (based on EN 50341-1:2012)

**I.S. EN 50341-2-2:2019**

*Incorporating amendments/corrigenda/National Annexes issued since publication:*

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

*This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):*

*NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.*

*This document is based on:*

EN 50341-2-2:2019

*Published:*

2019-05-17

*This document was published under the authority of the NSAI and comes into effect on:*

2019-06-04

## National Foreword

I.S. EN 50341-2-2:2019 is the adopted Irish version of the European Document EN 50341-2-2:2019, Overhead electrical lines exceeding AC 1 kV - Part 2-2: National Normative Aspects (NNA) for Belgium (based on EN 50341-1:2012)

This document does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

For relationships with other publications refer to the NSAI web store.

**Compliance with this document does not of itself confer immunity from legal obligations.**

*In line with international standards practice the decimal point is shown as a comma (,) throughout this document.*

<b>European foreword</b> .....	<b>6</b>
<b>1 Scope</b> .....	<b>7</b>
1.1 General .....	7
1.2 Field of application .....	7
<b>2 Normative references, definitions and symbols</b> .....	<b>7</b>
2.1 Normative references.....	7
2.3 Symbols .....	8
<b>3 Basis of design</b> .....	<b>8</b>
3.2 Requirements of overhead lines .....	8
3.2.2 Reliability requirements.....	8
<b>4 Actions on lines</b> .....	<b>9</b>
4.1 Introduction .....	9
4.3 Wind loads .....	9
4.3.1 Field of application and basic wind velocity .....	9
4.3.2 Mean wind velocity.....	10
4.3.3 Mean wind pressure.....	11
4.3.4 Turbulence intensity and peak wind pressure.....	11
4.4 Wind forces on overhead line components .....	11
4.4.1 Wind forces on conductors.....	11
4.4.1.1 General.....	11
4.4.1.2 Structural factor.....	11
4.4.1.3 Drag factor.....	12
4.4.2 Wind forces on insulator sets .....	12
4.4.3 Wind forces on lattice towers .....	12
4.4.3.1 General.....	12
4.4.3.2 Method 1 .....	12
4.4.4 Wind forces on poles.....	13
4.5 Ice loads.....	13
4.5.1 General.....	13
4.6 Combined wind and ice loads.....	13
4.6.1 Combined probabilities.....	13
4.6.2 Drag factors and ice densities.....	13
4.7 Temperature effects.....	13
4.8 Security loads .....	13
4.8.1 General.....	13
4.8.4 Mechanical conditions of application .....	14
4.9 Safety loads .....	14
4.9.1 Construction and maintenance loads.....	14
4.9.2 Loads related to the weight of linesmen .....	16
4.10 Forces due to short-circuit currents .....	16
4.11 Other special forces .....	16
4.12 Load cases.....	16

4.12.2	Standard load cases .....	16
4.13	Partial factors for actions .....	17
<b>5</b>	<b>Electrical requirements.....</b>	<b>18</b>
5.1	Introduction .....	18
5.2	Currents .....	18
5.2.1	Normal current .....	18
5.3	Insulation co-ordination.....	18
5.5	Minimum air clearance distances to avoid flashover .....	19
5.5.2	Application of the theoretical method in Annex E .....	19
5.6	Load cases for calculation of clearances.....	19
5.6.2	Maximum conductor temperature .....	19
5.6.3	Wind loads for determination of electric clearances .....	19
5.6.3.2	Nominal wind loads for determination of internal and external clearances .....	19
5.6.3.3	Extreme wind loads for determination of internal clearances .....	20
5.6.4	Ice loads for determination of electric clearances.....	20
5.8	Internal clearances within the span and at the top of support .....	20
5.9	External clearances .....	20
5.9.1	General.....	20
5.9.2	External clearances to ground in areas remote from buildings, roads, etc.....	21
5.9.3	External clearances to residential and other buildings .....	21
5.9.4	External clearances to crossing traffic routes .....	21
5.9.5	External clearances to adjacent traffic routes .....	22
5.9.6	External clearances to other power lines or overhead telecommunication lines ..	23
5.9.7	External clearances to recreational areas.....	23
5.10	Corona effect .....	23
5.10.1	Radio noise .....	23
5.10.1.3	Noise limit.....	23
5.10.2	Audible noise.....	23
5.10.2.3	Noise limit.....	23
5.11	Electric and magnetic fields .....	23
5.11.1	Electric and magnetic fields under a line .....	23
<b>6</b>	<b>Earthing systems .....</b>	<b>24</b>
6.1	Introduction .....	24
6.1.3	Earthing measures against lightning effects .....	24
6.4	Dimensioning with regard to human safety .....	24
6.4.1	Permissible values for touch voltages.....	24
<b>7</b>	<b>Supports.....</b>	<b>24</b>
7.2	Materials .....	24
7.2.1	Steel materials, bolts, nuts and washers, welding consumables.....	24
7.3	Lattice steel towers .....	25
7.3.5	Structural analysis.....	25
7.3.6	Ultimate limit states .....	25
7.3.6.1	General.....	25
7.3.6.4	Buckling resistance of members in compression.....	25

7.3.6.5	Buckling resistance of members in bending .....	25
7.3.8	Resistance of connections .....	26
7.4	Steel poles .....	26
7.4.3	Materials .....	26
7.4.6	Ultimate limit states .....	26
7.4.6.2	Resistance of cross section areas .....	26
7.4.7	Serviceability limit states .....	26
7.4.8	Resistance of connections .....	26
7.4.8.2	Bolts .....	26
7.4.8.4	Flanged bolted connections .....	26
7.4.8.7	Base plate and holding-down bolts .....	26
7.5	Wood poles .....	26
7.5.1	General .....	26
7.6	Concrete poles .....	27
7.6.1	General .....	27
7.6.4	Ultimate limit states .....	27
7.6.5	Serviceability limit states .....	27
7.7	Guyed structures .....	27
7.7.1	General .....	27
7.8	Other structures .....	27
7.10	Maintenance facilities .....	27
7.10.1	Climbing .....	27
<b>8</b>	<b>Foundations .....</b>	<b>28</b>
8.2	Basis of geotechnical design .....	28
8.2.1	General .....	28
8.2.2	Geotechnical design by calculation .....	28
<b>9</b>	<b>Conductors and earth-wires .....</b>	<b>28</b>
9.1	Introduction .....	28
9.2	Aluminium based conductors .....	28
9.2.1	Characteristics and dimensions .....	28
9.6	General requirements .....	29
9.6.2	Partial factor for conductors .....	29

## Tables

Table 3/BE.1 – Return period for temporary lines/towers .....	8
Table 3/BE.2 – Probability factor for temporary lines/towers .....	9
Table 3/BE.3 – Seasonal coefficient for temporary lines/towers.....	9
Table 4/BE.1 – Drag reduction factor for aerodynamic conductors .....	12
Table 4/BE.2 – Characteristics of slipping suspension clamps.....	14
Table 4/BE.3 – Mobile load .....	15
Table 4/BE.4 – Standard load cases.....	16
Table 4/BE.5 – Partial factors $\gamma$ and combinations factors $\psi$ for actions.....	17
Table 5/BE.1 – Insulation co-ordination in Belgium .....	18
Table 5/BE.2 – Clearances $D_{el}$ and $D_{pp}$ to withstand lightning overvoltages .....	19
Table 5/BE.3 – Clearances $D_{50Hz\_p\_e}$ and $D_{50Hz\_p\_p}$ to withstand the power frequency voltage.....	19
Table 5/BE.4 – Proximity zone clearance $D_v$ .....	20

## European foreword

- 1 The Belgian National Committee (NC) is identified by the following address:

Belgian Electrotechnical Committee (BEC)

Diamant Building  
Boulevard Reyerslaan, 80  
B-1030 Brussels  
Belgium

Contact The secretary of SC11  
E-mail [centraloffice@ceb-bec.be](mailto:centraloffice@ceb-bec.be)  
Phone +32 2 706 85 70

- 2 The Belgian NC has prepared this Part 2-2 (EN 50341-2-2) listing the Belgian National Normative Aspects (NNA), under its sole responsibility, and duly passed it through the CENELEC and CLC/TC11 procedures.

NOTE The Belgian NC also takes sole responsibility for the technically correct co-ordination of this NNA with EN 50341-1. It has performed the necessary checks in the frame of quality assurance/control. However, it is noted that this quality control has been made in the framework of the general responsibility of a standards committee under the national laws/regulations.

- 3 This NNA is normative in Belgium and informative for other countries.

- 4 This NNA has to be read in conjunction with Part 1 (EN 50341-1). All clause numbers used in this NNA correspond to those of Part 1. Specific subclauses, which are prefixed "BE", are to be read as amendments to the relevant text in Part 1. Any necessary clarification regarding the application of this NNA in conjunction with Part 1 shall be referred to the Belgian NC who will, in co-operation with CLC/TC11, clarify the requirements.

Where no reference is made in this NNA to a specific subclause, then Part 1 applies.

- 5 In case of "boxed values" defined in Part 1, amended values (if any), which are defined in this NNA shall be taken into account in Belgium.

However, any boxed value, whether in Part 1 or this NNA, shall not be amended in the direction of greater risk in a Project Specification.

- 6 The national Belgian standards/regulations related to overhead electrical lines exceeding 1 kV (AC) are listed in subclauses 2.1/BE.1 and BE.2.

Only significant extracts and summaries of the Belgian national regulations are presented in the A-deviations. They must be read in conjunction with the Belgian national regulations identified in 2.1/BE.1 which is in any case the relevant document.

NOTE All national standards referred to in this NNA will be replaced by the relevant European Standards as soon as they become available and are declared by the Belgian NC to be applicable and thus reported to the secretary of CLC/TC11.

- 7 Supplementary requirements in this NNA in addition to the part 1 are indicated by preceding the corresponding paragraphs by (snc) or (ncpt).

Paragraphs preceded by (A-dev) are required by national law: i.e. the General Regulations of the Electrical Installations (GREI).

**1 Scope****1.1 General****BE.1 Scope of Part 1 and Part 2-2**

(ncpt) Part 1 and the present Part 2-2 are only applicable to completely new or completely replaced overhead lines between two points, A and B, as well as to new supports on new foundations with nominal voltages above AC 50 kV.

(A-dev) Overhead lines or supports with nominal voltages exceeding AC 1 kV up to and including AC 50 kV are treated as a high voltage of the first category in the General Regulations of the Electrical Installations (GREI) and follow completely the GREI for their dimensioning.

**1.2 Field of application****(ncpt) BE.1 Application to telecommunication equipment**

Part 1 and this NNA apply to telecommunication equipment mounted on the new supports (e.g. dishes, antennas), particularly with respect to wind assumptions.

**2 Normative references, definitions and symbols****2.1 Normative references****(A-dev) BE.1 National regulations**

The General Regulations of the Electrical Installations (GREI) are given by the Belgian Royal Decree of March 1981 (latest issue) which has been published in the Belgian Statute Book of 29 April 1981.

The installations for transmission and distribution of electrical energy are covered in Book 3 after the restructuring of the GREI in 2019. The articles as mentioned in this NNA must therefore be translated to corresponding sections to find the relevant extracts.

**(ncpt) BE.2 National standards**
