Water quality - Guidance on mapping of seagrasses and macroalgae in the eulittoral zone

I.S. EN 17211:2019

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

This document is based on:

EN 17211:2019

National Foreword

I.S. EN 17211:2019 is the adopted Irish version of the European Document EN 17211:2019, Water quality - Guidance on mapping of seagrasses and macroalgae in the eulittoral zone

This document does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

For relationships with other publications refer to the NSAI web store.

Compliance with this document does not of itself confer immunity from legal obligations.

In line with international standards practice the decimal point is shown as a comma (,) throughout this document.

EUROPEAN STANDARD

EN 17211

NORME EUROPÉENNE

EUROPÄISCHE NORM

September 2019

ICS 07.060; 13.060.70

English Version

Water quality - Guidance on mapping of seagrasses and macroalgae in the eulittoral zone

Qualité de l'eau - Lignes directrices pour la cartographie des herbiers et des macroalgues dans la zone eulittorale

Wasserbeschaffenheit - Anleitung zur Kartierung von Seegräs und Makroalgen in der Eulitoralzone

This European Standard was approved by CEN on 6 January 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

EN 17211:2019 (E)

European foreword

This document (EN 17211:2019) has been prepared by Technical Committee CEN/TC 230 “Water analysis”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2020, and conflicting national standards shall be withdrawn at the latest by March 2020.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

Investigation of marine angiosperms (e.g. seagrasses) and macroalgae is an important part of marine environmental monitoring, facilitating the assessment of general ecological quality and the monitoring of ecological status. The requirement for using marine angiosperms and macroalgae in marine monitoring is inherent in numerous European and national directives: e.g. Marine Strategy Framework Directive (Directive 2008/56/EC), Water Framework Directive (WFD) (Directive 2000/60/EC), Urban Waste Water Treatment Directive (91/271/EEC), Habitats Directive (92/43/EEC) and the OSPAR and HELCOM conventions. Extensive green macroalgal beds are considered an indicator of eutrophication. Seagrasses and some macroalgae species are important contributors to biodiversity, as well as IUCN threatened species and they are investigated in very similar ways. They respond to environmental changes - primarily availability of light, nutrients, temperature and are impacted by physical disturbance. Monitoring of extent of area, biomass and species composition may therefore in many cases be used to characterize the environment and the degree of impacts.

The characterization of environmental conditions based on marine angiosperms and macroalgae requires the use of quantitative and qualitative mapping methods.

WARNING — Persons using this document should be familiar with normal fieldwork practice. This document does not purport to address all of the safety problems, if any, associated with its use. It is the responsibility of the user to establish appropriate safety and health practices

EN 17211:2019 (E)

1 Scope

This document provides guidance for survey design, equipment specification, survey methods, sampling and data handling of macroalgae and marine angiosperms such as *Zostera* in the intertidal soft bottom environment. It does not include polyeueryhaline terrestrial angiosperms that are found in saltmarshes. *Ruppia* is a genus of angiosperms that can be found in brackish water. This document can also be applied to the study of *Ruppia* in these environments.

The document comprises:

- development of a mapping and sampling programme;
- requirements for mapping and sampling equipment;
- procedures for remote sensing data collection;
- procedures for direct mapping and sampling in the field;
- recommendations for taxon identification and biomass determination;
- data handling.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN ISO 7027-2, *Water quality - Determination of turbidity - Part 2: Semi-quantitative methods for the assessment of transparency of waters (ISO 7027-2)*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1 biomass

total mass of living material in an area (m²)

[SOURCE: ISO 6107-3:1993, definition 12, modified – “a given body of water” has been replaced by “an area (m²)” to reflect the littoral location]

3.2 ground-truth

information that are confirmed in an actual field investigation which is done at a defined location

Note 1 to entry: Used to confirm the findings of, or to calibrate quantitative observations, from remote sensing.
