Irish Standard
I.S. EN ISO 16348:2003

Metallic and other inorganic coatings -
Definitions and conventions concerning
appearance (ISO 16348:2003)

I.S. EN ISO 16348:2003

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

English version

Metallic and other inorganic coatings - Definitions and conventions concerning appearance (ISO 16348:2003)

Revêtements métalliques et autres revêtements inorganiques - Définitions et principes concernant l'apparence (ISO 16348:2003)

Metallische und andere anorganische Überzüge - Definitionen und Festlegungen, die das Aussehen betreffen (ISO 16348:2003)

This European Standard was approved by CEN on 18 December 2002.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN ISO 16348:2003) has been prepared by Technical Committee CEN/TC 262 "Metallic and other inorganic coatings", the secretariat of which is held by BSI, in collaboration with Technical Committee ISO/TC 107 "Metallic and other inorganic coatings".

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2003, and conflicting national standards shall be withdrawn at the latest by November 2003.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

EN ISO 16348:2003 (E)

1 Scope

This European Standard specifies appearance and its associated terms and outlines the principles involved in validating appearance when it is specified as a requirement of metallic and other inorganic coatings.

2 Terms and definitions

For the purposes of this European Standard, the following terms and definitions apply.

2.1

appearance

all the visual characteristics of the significant surface

2.2

uniformity of appearance

all the visual characteristics of a coating being the same over the entire area of the significant surface of the coated component(s) within a single batch or from batch to batch

2.3

blemish

superficial imperfection or a deviation from the appearance of a specified reference material that does not necessarily detract proper function from the product

2.4

visible defect

unacceptable physical imperfection or flaw in the surface coating detracting from the specified reference material or from the product functions

3 Principle

When specified as a requirement of a coating, it is mandatory to have a test for the validation of appearance, particularly for use as a referee method. The relevant detailed information shall be supplied by the product standard.

NOTE 1 In order to ensure the durability of approved samples special precautions may be necessary, e.g. storage in desiccators, or expiry dates applied depending on storage conditions.

If there is no method specified by the product standard, a comparator method can be used to determine both appearance and uniformity. This shall be achieved by comparing the coated product with a representative approved reference sample (see clause 4).

Measuring techniques such as glossmeters, surface profiling, colour matching and other suitable test methods may be used, provided the required properties are specified in the product standard or in the product purchase order.

NOTE 2 A description of appearance only is, in itself, inadequate.

4 Representative approved reference samples

There may be more than one approved reference sample representing the variations of the parameters within a defined production process.

The samples shall be fabricated and coated using the same processes and techniques as used on the purchased piece parts in order to ensure total consistency and reproducibility of product.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 16348 was prepared by the European Committee for Standardization (CEN) in collaboration with Technical Committee ISO/TC 107, *Metallic and other inorganic coatings*, Subcommittee SC 2, *Test methods*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

Throughout the text of this document, read "...this European Standard..." to mean "...this International Standard...".

Foreword

This document (EN ISO 16348:2003) has been prepared by Technical Committee CEN/TC 262 "Metallic and other inorganic coatings", the secretariat of which is held by BSI, in collaboration with Technical Committee ISO/TC 107 "Metallic and other inorganic coatings".

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2003, and conflicting national standards shall be withdrawn at the latest by November 2003.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This European Standard specifies appearance and its associated terms and outlines the principles involved in validating appearance when it is specified as a requirement of metallic and other inorganic coatings.

2 Terms and definitions

For the purposes of this European Standard, the following terms and definitions apply.

2.1

appearance

all the visual characteristics of the significant surface

2.2

uniformity of appearance

all the visual characteristics of a coating being the same over the entire area of the significant surface of the coated component(s) within a single batch or from batch to batch

2.3

blemish

superficial imperfection or a deviation from the appearance of a specified reference material that does not necessarily detract proper function from the product

2.4

visible defect

unacceptable physical imperfection or flaw in the surface coating detracting from the specified reference material or from the product functions

3 Principle

When specified as a requirement of a coating, it is mandatory to have a test for the validation of appearance, particularly for use as a referee method. The relevant detailed information shall be supplied by the product standard.

NOTE 1 In order to ensure the durability of approved samples special precautions may be necessary, e.g. storage in desiccators, or expiry dates applied depending on storage conditions.

If there is no method specified by the product standard, a comparator method can be used to determine both appearance and uniformity. This shall be achieved by comparing the coated product with a representative approved reference sample (see clause 4).

Measuring techniques such as glossmeters, surface profiling, colour matching and other suitable test methods may be used, provided the required properties are specified in the product standard or in the product purchase order.

NOTE 2 A description of appearance only is, in itself, inadequate.

4 Representative approved reference samples

There may be more than one approved reference sample representing the variations of the parameters within a defined production process.

The samples shall be fabricated and coated using the same processes and techniques as used on the purchased piece parts in order to ensure total consistency and reproducibility of product.
