Drain and sewer systems outside buildings - Pumping systems - Part 3: Vacuum systems

I.S. EN 16932-3:2018&LC:2018

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

It has been brought to our attention that this document, issued on 2018-04-11, requires modification.

Description of modification:

In 6.4, 4th paragraph, delete the 1st sentence which is redundant to the third paragraph: "Explicit hydrodynamic calculation of the flow in vacuum sewers is extremely difficult due to the complexity of the unsteady multi-phase flow conditions (plug flow, slug flow, mixed air/water flow, mist) and due to the random nature of the flow pulses."

Please find enclosed the updated English version.

We apologise for any inconvenience this may cause.
