Irish Standard Recommendation
S.R. CEN/TR 17475:2020

Space - Use of GNSS-based positioning for road Intelligent Transport System (ITS) - Specification of the test facilities, definition of test scenarios, description and validation of the procedures for field tests related to security performance of GNSS-based positioning terminals

S.R. CEN/TR 17475:2020

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

This document is based on:

CEN/TR 17475:2020

RAPPORT TECHNIQUE

TECHNISCHER BERICHT

April 2020

ICS 33.060.30; 03.220.20; 35.240.60

English version

Space - Use of GNSS-based positioning for road Intelligent Transport System (ITS) - Specification of the test facilities, definition of test scenarios, description and validation of the procedures for field tests related to security performance of GNSS-based positioning terminals

Espace - Utilisation de la localisation basée sur les GNSS pour les systèmes de transports routiers intelligents (ITS) - Spécification des installations d'essais, définition des scénarios d'essais, description et validation des procédures d'essais sur le terrain en matière de performances de sécurité des terminaux de positionnement basés sur les GNSS

Spezifikation der Testeinrichtungen, Definition von Testscenarien, Beschreibung und Validierung der Verfahren für Feldtests in Bezug auf die Sicherheitsleistung von GNSS-basierten Ortungsterminals

This Technical Report was approved by CEN on 7 March 2020. It has been drawn up by the Technical Committee CEN/CLC/JTC 5.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

CEN/TR 17475:2020 (E)

European foreword

This document (CEN/TR 17475:2020) has been prepared by Technical Committee CEN-CENELEC/TC 5 “Space”, the secretariat of which is held by DIN.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

1 Scope

1.1 Purpose of the document

This document is the CEN Technical Report WP2-D2 of the GP-START project, regarding the test procedures for assessment of robustness to security attacks.

Starting from the definition of security attacks taxonomy and security metrics highlighted in CEN/TR 17464, this task aims to:

1. Specify test facilities to be used in the field tests. This comprises both hardware and software equipment.
2. Define relevant test scenarios applicable to security performances. Also, the field test needed for validation of scenarios will be properly described.
3. Define end-to-end test procedures comprising experimental validation of the whole test chain.

The results will serve as the operational basis for field testing of robustness against security attacks.

1.2 Overview of the document

The outline of the document is as follows:

- Clause 5 provides a review of security metrics, in line with the other deliverables of the project and in particular with CEN/TR 17465 and CEN/TR 17464.
- Clause 6 consolidates the test approach with respect to jamming and spoofing oriented scenarios.
- Clause 7 provides a definition of relevant test scenarios, applicable to security testing, starting from outcomes of CEN/TR 17464.
- Clause 8 provides an in-depth discussion regarding test facilities, focusing on both data recording and replay.
- Clause 9 concludes with a set of real-life tests, for a preliminary end-to-end validation of the procedures.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
