Irish Standard Recommendation
S.R. CEN/TS 17510:2020

Materials obtained from end-of-life tyres -
Determination of the specific surface area
of powders - Method based on krypton
adsorption

S.R. CEN/TS 17510:2020

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

This document is based on:

CEN/TS 17510:2020

National Foreword

S.R. CEN/TS 17510:2020 is the adopted Irish version of the European Document CEN/TS 17510:2020, Materials obtained from end-of-life tyres - Determination of the specific surface area of powders - Method based on krypton adsorption

This document does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

For relationships with other publications refer to the NSAI web store.

Compliance with this document does not of itself confer immunity from legal obligations.

In line with international standards practice the decimal point is shown as a comma (,) throughout this document.

TECHNICAL SPECIFICATION

CEN/TS 17510

SPÉCIFICATION TECHNIQUE

TECHNISCHE SPEZIFIKATION

October 2020

ICS 83.160.01; 13.030.50

English Version

Materials obtained from end-of-life tyres - Determination of the specific surface area of powders - Method based on krypton adsorption

Matériaux produits à partir de pneus usagés non réutilisables - Détermination de la surface spécifique des poudrettes - Méthode fondée sur l'adsorption de krypton

Materialien aus Altreifen - Bestimmung der spezifischen Oberfläche von Mehlen - Verfahren basierend auf Kryptonadsorption

This Technical Specification (CEN/TS) was approved by CEN on 24 August 2020 for provisional application.

The period of validity of this CEN/TS is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the CEN/TS can be converted into a European Standard.

CEN members are required to announce the existence of this CEN/TS in the same way as for an EN and to make the CEN/TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the CEN/TS) until the final decision about the possible conversion of the CEN/TS into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (CEN/TS 17510:2020) has been prepared by Technical Committee CEN/TC 366 “Materials obtained from End-of-Life Tyres (ELT)”, the secretariat of which is held by UNI.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organisations of the following countries are bound to announce this Technical Specification: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

CEN/TS 17510:2020 (E)

Introduction

Specific surface area (A_s) is a parameter of great importance when it comes to physical characterization of materials such as granulates and powders from rubber materials. Like other physical characteristics, specific surface area could influence the performance of materials in its different applications.

Depending on the type of sample to be characterized, several different methods can be used for the determination of the specific surface area, generally based on different physical principles. The most widespread and useful method used in materials characterization is gas adsorption, either through gravimetric or volumetric methods.

For very low surface area samples the traditional volumetric method of nitrogen adsorption at 77 K or Argon at 87 K shows some important limitations. Alternatively, for absolute areas as low as $0,05 \text{ m}^2\text{g}^{-1}$ the suitable method for A_s determination is krypton adsorption at 77 K.

1 Scope

This document specifies a method for the determination of low specific surface area of powders ELTs rubber by measuring the amount of physically adsorbed krypton gas and applying the theoretical multipoint Brunauer, Emmett and Teller (BET) method.

This document defines a specific method for powders taking into account that, in order to obtain an accurate value of specific surface area, a representative sample of the material to be tested is taken according to the principle that every particle of the sample that represents the lot have an equal probability of being included in the sample.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 14243-1:2019, *Materials obtained from end of life tyres — Part 1: General definitions related to the methods for determining their dimension(s) and impurities*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 14243-1:2019 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
