Irish Standard Recommendation
S.R. CEN/TR 13582:2021

Installation of thermal energy meters - Guidelines for the selection, installation and operation of thermal energy meters

S.R. CEN/TR 13582:2021

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):

NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.

This document is based on:

CEN/TR 13582:2021

National Foreword

S.R. CEN/TR 13582:2021 is the adopted Irish version of the European Document CEN/TR 13582:2021, Installation of thermal energy meters - Guidelines for the selection, installation and operation of thermal energy meters

This document does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

For relationships with other publications refer to the NSAI web store.

Compliance with this document does not of itself confer immunity from legal obligations.

In line with international standards practice the decimal point is shown as a comma (,) throughout this document.

CEN/TR 13582:2021 (E)

European foreword

This document (CEN/TR 13582:2021) has been prepared by Technical Committee CEN/TC 176 “Thermal energy meters”, the secretariat of which is held by SIS.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

Introduction

Metering devices for thermal energy (heat and cooling meters) are only working correctly and consistently if the system design considers the minimum and maximum ratings for temperature, temperature difference and flow rate according to the approved ranges. The metering device should be selected for the approved legal range and the application area. The thermal energy meter should be installed according to the valid requirements. During commissioning the thermal energy meter is checked for both correct installation and full functionality and afterwards sealed against unauthorized opening.

According to the European harmonized standard EN 1434-6 a commissioning is obligatory to ensure that the metering device accurately measures the planned or predicted consumption.

Installing the metering devices or their sub-assemblies incorrectly (e.g. an incorrect combination of temperature sensors with non-approved pockets) does not guarantee the measuring accuracy. Hence, the measurement deviations may exceed the permissible error limits. National calibration laws state that the metering point operator should ensure that the metering device is set up, connected, handled and maintained correctly to guarantee the measuring accuracy. Incorrect measurements result in bills that cannot be used in business transactions.

The metering point operator is in district heating networks responsible for a proper installation and commissioning of the metering devices. The metering point operator can also delegate this task to a service company. The building owner or the building owner's representative (e.g. a metering service company) is in sub metering applications responsible for a proper installation and commissioning of the metering devices.

The EN 1434 standards provide technical principles and practical advice in selecting, installing and commissioning of thermal energy meters. However, because a standard cannot cover all areas completely, this report shall assist users of thermal energy meters.

CEN/TR 13582:2021 (E)

1 Scope

The EN 1434 standards provide technical principles and practical advice in selecting, installing and commissioning of thermal energy meters. However, because a standard cannot cover all areas completely, this document assists users of thermal energy meters.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 1434-1, *Thermal energy meters - Part 1: General requirements*

EN 1434-2, *Thermal energy meters - Part 2: Constructional requirements*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 1434-1 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1

DH (network)

district heating system, DC: district cooling system

3.2

meter: thermal energy meter

heat meter or cooling meter

3.3

water

domestic water

3.4

hot water

domestic hot water

3.5

fluid additive

fluid used to supplement a shortage of the heat transfer medium due to leaks

3.6

fluid

heat transfer medium in a DH/DC system

3.7
