Preface

This Standard was prepared by the Standards Australia Committee ME-004, Lift Installations.

The objective of this Standard is to provide a correlation between AS 1735.5:2015 and AS 1735.5.1:2019 for escalators and moving walks built in accordance with AS 1735.5.1:2019.

This Standard is an adoption with national modifications, and has been reproduced from, *CEN/TR 115-3:2017, Safety of escalators and moving walks — Part 3: Correlation between EN 115-1:2008+A1:2010 and EN 115-1:2017*.

The modifications are additional requirements and are set out in Appendix ZZ, which has been added at the end of the source text.

Appendix ZZ lists the variations to CEN/TR 115-3:2017 for the application of this Standard in Australia.

As this document has been reproduced from an International Technical Report, the following applies:

- (a) In the source text “this Technical Report” should read “this Australian Standard”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
