Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee QR-005, Dependability, to supersede AS IEC 62402:2014.

The objective of this Standard is to provide requirements and guidance for obsolescence management applicable to any organization that is dependent on another organization to obtain value from the usefulness of the items that it provides. A cost-effective obsolescence management process and the activities used to implement the process are applicable throughout all phases of an item's life cycle.

This document covers the following areas:

- (a) Establishing an obsolescence management policy.
- (b) Establishing an infrastructure and an organization.
- (c) Developing an obsolescence management plan (OMP).
- (d) Developing strategies to minimize obsolescence during design.
- (e) Determining an obsolescence management approach.
- (f) Selecting obsolescence resolution and implementation.
- (g) Measuring and improving the performance of the outcomes of the obsolescence management activities.

This Standard is identical with, and has been reproduced from, IEC 62402:2019, *Obsolescence management*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
