

AS/NZS IEC 60092.376:2020
IEC 60092-376:2017

AS/NZS IEC 60092.376:2020

Australian/New Zealand Standard™

Electrical installations in ships

Part 376: Cables for control and instrumentation circuits 150/250 V (300 V)

AS/NZS IEC 60092.376:2020

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee EL-003, Electric Wires And Cables. It was approved on behalf of the Council of Standards Australia on 26 November 2019 and by the New Zealand Standards Approval Board on 18 December 2019.

This Standard was published on 24 January 2020.

The following are represented on Committee EL-003:

- Australian Cablemakers Association
- Australian Industry Group
- Electrical Compliance Testing Association of Australia
- Electrical Regulatory Authorities Council (Australia)
- Engineers Australia
- Institute of Electrical Inspectors (Australia)
- Master Electricians (New Zealand)
- National Electrical and Communications Association (Australia)
- Queensland University of Technology
- WorkSafe New Zealand

This Standard was issued in draft form for comment as DR AS/NZS IEC 60092.376:2019.

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-003, Electric Wires and Cables, to supersede AS 60092.376—2005, *Electrical installations in ships, Part 376: Cables for control and instrumentation circuits 150/250 V (300 V)*.

The objective of this Standard is to specify requirements for screened and unscreened cables for control and instrumentation circuits on ships and offshore units. The cables have extruded solid insulation with a voltage rating of 150/250V (300V) and are intended for fixed installations.

The constructional requirements and test methods are aligned with those indicated in AS/NZS IEC 60092.350, unless otherwise specified in this document.

This document covers the following:

- (a) Standardizes cables whose safety and reliability are ensured when they are installed in accordance with the requirements of IEC 60092-352.
- (b) Lays down standard manufacturing requirements and characteristics of such cables directly or indirectly bearing on safety.
- (c) Specifies test methods for checking conformity with those requirements.

This Standard is identical with, and has been reproduced from, IEC 60092-376:2017, *Electrical installations in ships — Part 376: Cables for control and instrumentation circuits 150/250 V (300 V)*.

As this document has been reproduced from an International Standard, the following applies:

- (i) In the source text “this part of IEC 60092” should read “this Australian/New Zealand Standard”.
- (ii) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
