

Australian/New Zealand Standard™

**Video surveillance systems for use in  
security applications**

**Part 2.2: Video transmission protocols  
— IP interoperability implementation  
based on HTTP and REST services**

AS/NZS IEC 62676.2.2:2020

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee EL-031, Intruder Alarm Equipment and Installations. It was approved on behalf of the Council of Standards Australia on 18 March 2020 and by the New Zealand Standards Approval Board on 5 February 2020.

This Standard was published on 24 April 2020.

The following are represented on Committee EL-031:

- Australian Digital & Telecommunications Industry Association
- Australian Federal Police
- Australian Industry Group
- Australian Security Industry Association
- Engineers Australia
- Fire Protection Association Australia
- Insurance Council of Australia
- New Zealand Security Association
- NSW Police Force
- Queensland Police Service
- Security Providers Association of Australia
- South Australia Police
- Victoria Police
- Victorian Security Institute

This Standard was issued in draft form for comment as DR AS/NZS IEC 62676.2.2:2019.

## Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-031, Intruder Alarm Equipment and Installations.

The objective of this Standard is to specify a compliant IP video protocol based on HTTP and REST services.

Video transmission devices are often equipped with web servers that respond to HTTP requests. The HTTP response may contain XML content (for GET actions), XML response information (for SET actions), or various text/binary content (for retrieval of configuration data, etc.). REST is an approach to creating services that expose all information as resources in a uniform way. The ease of using REST is its uniform interface for operations. Since everything is represented as a resource, create, retrieve, update, and delete (CRUD) operations use the same URI. This specification leverages the features of HTTP and REST for IP video transmission.

A video transmission device supporting conformance to the requirements of this standard based on HTTP and REST Services as described in this document is declared as compatible to 'AS/NZS IEC 62676-2 HTTP and REST interoperability.'

This Standard is identical with, and has been reproduced from, IEC 62676-2-2:2013, *Video surveillance systems for use in security applications — Part 2-2: Video transmission protocols — IP interoperability implementation based on HTTP and REST services*.

As this document has been reproduced from an International Standard, the following applies:

- (a) In the source text "this part of IEC 62676" should read "this Australian/New Zealand Standard".
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms "normative" and "informative" are used in Standards to define the application of the appendices or annexes to which they apply. A "normative" appendix or annex is an integral part of a Standard, whereas an "informative" appendix or annex is only for information and guidance.
