Preface

This Standard was prepared by the Standards Australia Committee ME-004, Lift Installations, to supersede AS 1735.5:2015 *Lifts, escalators and moving walks, Part 5: Escalators and moving walks*.

The objective of this Standard is applicable for new escalators and moving walks (pallet or belt type) as defined in Clause 3.

This Standard covers all significant hazards, hazardous situations and events relevant to escalators and moving walks when they are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer (see Clause 4).

This Standard is not applicable to escalators and moving walks which were manufactured before the date of its publication. It is, however, recommended that existing installations be adapted to this Standard.

NOTE For wiring of escalators or moving walks, refer to AS/NZS 3000 *Electrical installations* (known as the *Australian/New Zealand Wiring Rules*).

This Standard is an adoption with national modifications, and has been reproduced from, *EN 115-1:2017, Safety of escalators and moving walks — Part 1: Construction and installation*.

The modifications are additional requirements and are set out in Appendix ZZ, which has been added at the end of the source text.

Appendix ZZ lists the variations to EN 115-1:2017 for the application of this Standard in Australia.

As this document has been reproduced from an International Standard, the following applies:

- (a) In the source text “this European Standard” should read “this Australian Standard”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
