Preface

This Standard was prepared by the Standards Australia Committee MB-025, Security and Resilience, to supersede AS ISO 22301:2017, *Societal security — Business continuity management systems — Requirements*.

The objective of this document is to specify requirements to implement, maintain and improve a management system to protect against, reduce the likelihood of the occurrence of, prepare for, respond to and recover from disruptions when they arise.

The requirements specified in this document are generic and intended to be applicable to all organizations, or parts thereof, regardless of type, size and nature of the organization. The extent of application of these requirements depends on the organization's operating environment and complexity.

This document is applicable to all types and sizes of organizations that —

- (a) implement, maintain and improve a business continuity management system (BCMS);
- (b) seek to ensure conformity with the stated business continuity policy;
- (c) need to be able to continue to deliver products and services at an acceptable predefined capacity during a disruption; and
- (d) seek to enhance their resilience through the effective application of the BCMS.

This document can be used to assess an organization's ability to meet its own business continuity needs and obligations.

This document is identical with, and has been reproduced from, ISO 22301:2019, *Security and resilience — Business continuity management systems — Requirements*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

Contents

| | |
|--|----|
| Preface | ii |
| Foreword | v |
| Introduction | vi |
