## Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee IT-004, Geographical Information/Geomatics, to supersede AS/NZS ISO 19127:2006, *Geographic information — Geodetic codes and parameters*.

The objective of this Standard is to define the management and operations of the ISO geodetic register and identifies the data elements, in accordance with AS/NZS ISO 19111 and the core schema within AS ISO 19135.1, required within the geodetic register.

This Standard is identical with, and has been reproduced from, ISO 19127:2019, *Geographic information — Geodetic register*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
