Australian Standard™

Methods of test for elastomers

Method 23: Rubber—Vulcanized— Determination of resistance to liquids

[ISO title: Rubber, vulcanized—Determination of the effect of liquids]

Standards Australia

This Australian Standard was prepared by Committee RU/3, Analysis and Testing of Elastomers. It was approved on behalf of the Council of Standards Australia on 15 September 2000 and published on 1 November 2000.

The following interests are represented on Committee RU/3:

Australasian Plastics and Rubber Institute
Australian Chamber of Commerce and Industry

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This is a free preview. Purchase the entire publication at the link below:
