Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee IT-030, ICT Governance and Management, to supersede SA/SNZ TR ISO/IEC 20000.10:2014, *Information technology — Service management, Part 10: Concepts and terminology*.

The objective of this Standard is to describe the core concepts of AS/NZS ISO/IEC 20000 (all parts), identifying how the different parts support AS/NZS ISO/IEC 20000.1 as well as the relationships between AS/NZS ISO/IEC 20000.1 and other Standards and Technical Reports.

This document also includes the terminology used in all parts of AS/NZS ISO/IEC 20000 and ISO/IEC 20000, so that organizations and individuals can interpret the concepts correctly.

This Standard is identical with, and has been reproduced from, ISO/IEC 20000-10:2018, *Information technology — Service management — Part 10: Concepts and vocabulary*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
