AS 60695.6.1—2006 IEC 60695-6-1, Ed 2.0 (2005)

Australian Standard[™]

Fire hazard testing

Part 6.1: Smoke obscuration—General guidance

This is a free page sample. Access the full version online.

This Australian Standard® was prepared by Committee EL-053, Fire hazard testing— Electrotechnical equipment. It was approved on behalf of the Council of Standards Australia on 23 May 2006.

This Standard was published on 28 June 2006.

The following are represented on Committee EL-053:

- Australian Electrical and Electronic Manufacturers Association
- Australian Information Industry Association
- Electrical Compliance Testing Association
- Electrical Regulatory Authorities Council
- Energy Networks Association

This Standard was issued in draft form for comment as DR 06181.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through public comment period.

Keeping Standards up-to-date

Australian Standards[®] are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting **www.standards.org.au**

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at **mail@standards.org.au**, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee EL-053, Fire hazard testing—Electrotechnical equipment.

The objective of this series of standards is to provide the electrotechnology industry and standards writing committees with a series of standards which give guidance on assessing the fire hazard of electrotechnical products.

This Standard is identical with, and has been reproduced from IEC 60695-6-1, Ed 2.0 (2005), *Fire hazard testing - Part 6.1: Smoke obscuration - General guidance.*

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text 'IEC 60695-6-1' should read 'AS 60695.6.1'.
- (c) A full point should be substituted for a comma when referring to a decimal marker.
- (d) Any French text on figures should be ignored.

The terms 'normative' and 'informative' are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

Any International Standard referenced should be replaced by an equivalent Australian Standard where one is available. The availability of equivalent Australian Standards can be determined either from the Standards Web Shop at www.standards.com.au or from the annual printed catalogue of Australian Standards.

CONTENTS

			Page	
INT	RODI		v	
1	Scope		1	
2 Normative references		native references	1	
3	Term	s, definitions and symbols	2	
	3.1	Terms and definitions	2	
	3.2	Symbols	5	
4	General aspects of smoke test methods		6	
	4.1	Fire scenarios and fire models	6	
	4.2	Factors affecting smoke production	7	
5	Princ	iples of smoke measurement	9	
	5.1	Bouguer's law	9	
	5.2	Extinction area	10	
	5.3	Log ₁₀ units	10	
	5.4	Light sources	10	
	5.5	Specific extinction area	11	
	5.6	Mass optical density	12	
	5.7	Visibility	12	
6	Statio	c and dynamic methods	12	
	6.1	Static methods	12	
	6.2	Dynamic methods	13	
7	Test	methods	14	
	7.1	Consideration of test methods	14	
	7.2	Selection of test specimen	14	
8	Presentation of data		15	
9	Relevance of data to hazard assessment		15	
Anr	nex A	(informative) Calculation of visibility	17	
Anr	nex B	(informative) Relationships between D_s and some other smoke parameters		
as i	as measured in IEC 60695-6-30 and IEC 60695-6-31			
Anr "thr	Annex C (informative) Relationships between percent transmission, as measured in a "three metre cube" enclosure, and extinction area			
D:L			0.4	
RID				

Figure 1 – Chart of different phases in the development of a fire within a compartment	7
Figure 2 – Attenuation of light by smoke	9
Figure 3 – Extinction area	10
Figure 4 – Dynamic smoke measurement	13
Figure 5 – Evaluation and consideration of smoke test methods	16
