

High-voltage test techniques

Part 1: General definitions and test requirements

AS IEC 60060.1:2018

This Australian Standard® was prepared by EL-007, Power Switchgear. It was approved on behalf of the Council of Standards Australia on 27 September 2018.

This Standard was published on 18 October 2018.

The following are represented on Committee EL-007:

- Australian Industry Group
- Energy Networks Australia
- Engineers Australia
- Testing Interest of Australia
- University of New South Wales

This Standard was issued in draft form for comment as DR AS IEC 60060.1:2018.

Preface

This Standard was prepared by the Standards Australia Committee EL-007, Power Switchgear.

The objective of this Standard is to set out general definitions and test requirements applicable to dielectric tests with alternating voltage, dielectric tests with direct voltage, dielectric tests with impulse voltage and dielectric tests with combinations of the above. This document is applicable to tests on equipment having its highest voltage for equipment U_m above 1 kV.

This Standard is identical with, and has been reproduced from, IEC 60060-1:2010, *High-voltage test techniques — Part 1: General definitions and test requirements*.

As this document has been reproduced from an International Standard, the following applies:

- (a) In the source text “this International Standard/this part of IEC 60060” should read “this Australian Standard”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
