IEC 60079-10-2, Ed.2.0 (2015)

AS/NZS 60079.10.2:2016

Australian/New Zealand Standard™

**Explosive atmospheres**

**Part 10.2: Classification of areas—  
Explosive dust atmospheres**

## **AS/NZS 60079.10.2:2016**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee MS-011, Classification of Hazardous Areas. It was approved on behalf of the Council of Standards Australia on 26 October 2015 and on behalf of the Council of Standards New Zealand on 19 February 2016.  
This Standard was published on 5 April 2016.

---

The following are represented on Committee MS-011:

Australian Chamber of Commerce and Industry  
Australian Industry Group  
Australian Paint Manufacturers' Federation  
Australian Petroleum Production and Exploration Association  
Aviation and Marine Engineers Association  
Bureau of Steel Manufacturers of Australia  
Department of Natural Resources and Mines, Qld  
Electrical Contractors Association of New Zealand  
Engineers Australia  
Environmental Protection Authority New Zealand  
Gas Association of New Zealand  
Gas Energy Australia  
Institute of Electrical Inspectors  
Institute of Instrumentation, Control & Automation Australia  
Institution of Chemical Engineers  
National Electrical and Communications Association  
New Zealand Oil Refining Companies  
Responsible Care New Zealand  
Royal Australian Chemical Institute  
WorkCover New South Wales  
Worksafe New Zealand  
WorkSafe Victoria

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at [www.saiglobal.com.au](http://www.saiglobal.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

---

*This Standard was issued in draft form for comment as DR2 AS/NZS 60079.10.2:2015.*

AS/NZS 60079.10.2:2016

# Australian/New Zealand Standard™

## Explosive atmospheres

### Part 10.2: Classification of areas— Explosive dust atmospheres

Originated in Australia as AS 2430.2—1981.  
Originated in New Zealand as NZS 6101.2:1990.  
Jointly revised and designated AS/NZS 61241.3:1999.  
Previous edition AS/NZS 60079.10.2:2011.  
Second edition 2016.

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee MS-011, Classification of Hazardous Areas, to supersede AS/NZS 60079.10.2:2011, *Explosive atmospheres*, Part 10.2: *Classification of areas—Combustible dust atmospheres*.

The objective of this Standard is to set out the requirements for the identification and classification of areas where explosive dust atmospheres may be present, in order to permit the proper assessment of ignition sources in such areas.

This Standard is identical with, and has been reproduced from IEC 60079-10-2, Ed.2.0 (2015), *Explosive atmospheres*, Part 10-2: *Classification of areas—Explosive dust atmospheres*. Changes to the Standard introduced by this edition are listed in the IEC Foreword.

The classification of dust hazardous areas does not apply to domestic installations and is not intended to be applied to small commercial or retail installations where the type of handling is mainly manual and the scale of the operation is small and not continuous, such that the potential for significant dust clouds is low. These criteria would typically apply to small bakeries associated with ‘in store’ preparation of foods and other similar applications.

Competence for classification of hazardous areas, as described in Clause 4.3 of the Standard, may also be supported by training and/or assessment to relevant units from AS/NZS 4761, Parts 1 and 2, *Competencies for working with electrical equipment for hazardous areas (EEHA)*, or a similar training and/or assessment framework.

This Standard notes the optional consideration of Equipment Protection Levels (EPL) in Clause 4.1. Required processes for establishing EPL are provided in AS/NZS 60079.14.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number appears on the cover and title page while the International Standard number appears only on the cover.
- (b) In the source text ‘this part of IEC 60079’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards. The replacements at the time of publication are detailed in the following table but reference to the latest Australian or Australian/New Zealand Standard should be applied for any revisions after the publication of this Standard.

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
IEC		AS/NZS	
60079	Explosive atmospheres	60079	Explosive atmospheres
60079-0	Part 0: General requirements	60079.0	Part 0: General requirements
60079-10-1	Part 10-1: Classification of areas— Explosive gas atmospheres	60079.10.1	Part 10.1: Classification of areas— Explosive gas atmospheres (IEC 60079-10-1, Ed.1.0 (2008) MOD)

Only normative references that have been adopted as Australian or Australian/New Zealand Standard have been listed.

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

## CONTENTS

1	Scope .....	8
2	Normative references .....	9
3	Terms and definitions .....	9
4	Area classification .....	12
4.1	General .....	12
4.2	Area classification procedure for explosive dust atmospheres .....	13
4.3	Competence of personnel .....	14
5	Sources of release .....	14
5.1	General .....	14
5.2	Dust containment .....	14
5.3	Identification and grading of sources of release .....	14
6	Zones .....	15
6.1	General .....	15
6.2	Extent of zones .....	15
6.2.1	General .....	15
6.2.2	Zone 20 .....	15
6.2.3	Zone 21 .....	16
6.2.4	Zone 22 .....	16
7	Dust layers .....	16
8	Documentation .....	17
8.1	General .....	17
8.2	Drawings, data sheets and tables .....	17
8.2.1	Content of documents .....	17
8.2.2	Preferred Symbol key for area classification zones .....	18
	Annex A (informative) Area classification examples .....	19
A.1	Examples of zones .....	19
A.1.1	General .....	19
A.1.2	Zone 20 .....	19
A.1.3	Zone 21 .....	19
A.1.4	Zone 22 .....	19
A.2	Bag emptying station within a building and without exhaust ventilation .....	20
A.3	Bag emptying station with exhaust ventilation .....	21
A.4	Cyclone and filter with clean outlet outside building .....	21
A.5	Drum tipper within a building without exhaust ventilation .....	22
	Annex B (informative) Housekeeping .....	24
B.1	Introductory remarks .....	24
B.2	Levels of housekeeping .....	24
	Annex C (informative) Hybrid mixtures .....	26
C.1	General .....	26
C.2	Ventilation .....	26
C.3	Explosive limits .....	26
C.4	Chemical reactions .....	26
C.5	Minimum ignition parameters .....	26
