

Australian Standard™

## Fire hazard testing

### Part 5.2: Corrosion damage effects of fire effluent—Summary and relevance of test methods

This Australian Standard was prepared by Committee EL-053, Fire hazard testing—Electrotechnical equipment. It was approved on behalf of the Council of Standards Australia on 23 May 2006.  
This Standard was published on 22 June 2006.

---

The following are represented on Committee EL-053:

Australian Electrical and Electronic Manufacturers Association  
Australian Information Industry Association  
Electrical Compliance Testing Association  
Electrical Regulatory Authorities Council  
Energy Networks Association

---

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at [www.standards.com.au](http://www.standards.com.au) and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

---

*This Standard was issued in draft form for comment as DR 06179.*

## PREFACE

This Standard was prepared by the Standards Australia Committee EL-053, Fire hazard testing—Electrotechnical equipment.

The objective of this series of standards is to provide the electrotechnology industry and standards writing committees with a series of standards which give guidance on assessing the fire hazard of electrotechnical products.

This Standard is identical with, and has been reproduced from IEC/TS 60695-5-2, Ed 2.0 (2002), *Fire hazard testing - Part 5.2: Corrosion damage effects of fire effluent - Summary and relevance of test methods*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘IEC/TS 60695-5-2’ should read ‘AS 60695.5.2’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.
- (d) Any French text on figures should be ignored.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

Any International Standard referenced should be replaced by an equivalent Australian Standard where one is available. The availability of equivalent Australian Standards can be determined either from the Standards Web Shop at [www.standards.com.au](http://www.standards.com.au) or from the annual printed catalogue of Australian Standards.

# CONTENTS

	<i>Page</i>
INTRODUCTION .....	iv
1 Scope .....	1
2 Normative references .....	1
3 Terms and definitions .....	1
4 Classification of test methods .....	2
4.1 Introduction .....	2
4.2 Test specimen .....	3
4.3 Fire model .....	3
4.4 The nature of the corrosivity measurement .....	3
5 Published test methods .....	4
5.1 Introduction .....	4
5.2 Tests for the determination of halogen acid in combustion gases .....	4
5.3 Tests for the determination of the acidity and conductivity of combustion gases dissolved in an aqueous solution .....	5
5.4 Test for the determination of corrosive gases by using the copper mirror test in ASTM D 2671-00 [9] .....	6
5.5 Static method (ISO 11907-2 [10]) .....	7
5.6 Travelling furnace method (ISO 11907-3 [11]) .....	9
5.7 Cone corrosimeter method .....	12
6 Leakage current and metal loss (IEC 60695-5-3) .....	13
6.1 Purpose and principle .....	13
6.2 Test specimen .....	13
6.3 Corrosion targets .....	13
6.4 Test method .....	14
7 Overview of methods and relevance of data .....	14
Annex A (informative) Acidity and conductivity of aqueous solutions – Test methods .....	18
Annex B (informative) Determination of repeatability and reproducibility – Comparative tests of solutions of combustion gases .....	19
Bibliography .....	23
Figure 1 – Schematic drawing of a serpentine-track resistance target .....	8
Figure 2 – Schematic drawing of a typical corrosion target of defined metal thickness .....	11
Figure 3 – Interdigitated leakage current target .....	14
Table 1 – General classification of fire stages in accordance with ISO/TR 9122-1 .....	4
Table 2 – Overview of corrosivity test methods .....	16
Table A.1 – Test methods for the measurement of acidity and conductivity of aqueous solutions obtained after bubbling combustion effluent through water .....	18
Table B.1 – Determination of repeatability and reproducibility – Comparative pH tests on solutions of combustion gases .....	20
Table B.2 – Determination of repeatability and reproducibility – Comparative resistivity tests on solutions of combustion gases .....	21
Table B.3 – Results obtained on brominated polycarbonate .....	22
