

AS/NZS IEC 61935.1:2006
IEC 61935-1:2005

AS/NZS IEC 61935.1:2006

Australian/New Zealand Standard™

**Testing of balanced communication
cabling in accordance with
ISO/IEC 11801**

Part 1: Installed cabling

AS/NZS IEC 61935.1:2006

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee CT-001, Communications Cabling. It was approved on behalf of the Council of Standards Australia on 20 September 2006 and on behalf of the Council of Standards New Zealand on 22 September 2006.
This Standard was published on 11 October 2006.

The following are represented on Committee CT-001:

Australian Chamber of Commerce and Industry
Australian Communications and Media Authority
Australian Electrical and Electronic Manufacturers Association
Australian Information Industry Association
Communications Alliance
Electrical Compliance Testing Association
Energy Networks Association
Engineers Australia
National Electrical and Communications Association
New Zealand Consulting Interests
New Zealand Defence Force
Singtel Optus
Telstra Corporation
Vendor Interests, NZ

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 06363.

AS/NZS IEC 61935.1:2006

Australian/New Zealand Standard™

**Testing of balanced communication
cabling in accordance with
ISO/IEC 11801**

Part 1: Installed cabling

Originated as AS/NZS 3087.1:2000.
Previous edition AS/NZS 3087.1:2003.
Jointly revised and redesignated as AS/NZS IEC 61935.1:2006.

PREFACE

This Standard was prepared by the Standards Australia/Standards New Zealand Committee CT-001, Communications Cabling to supersede AS/NZS 3087.1:2003, *Telecommunications installations—Generic cabling systems*, Part 1: *Specification for the testing balanced communication cabling*.

The objective of this Standard is to provide specific reference measurement procedures for cabling parameters and the requirements for field tester accuracy to measure cabling parameters identified in ISO/IEC 11801 which has been adopted as AS/NZS 3080.

This Standard is identical with, and has been reproduced from IEC 61935-1:2005, *Testing of balanced communication cabling in accordance with ISO/IEC 11801—Part 1: Installed cabling*.

As this Standard is reproduced from an international standard, the following applies:

- (a) Its number appears on the cover and title page while the international standard number appears only on the cover.
- (b) In the source text ‘this part of IEC 61935’ should read ‘this Australian/New Zealand Standard.’
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
ISO/IEC		AS/NZS	
11801	Information technology— Generic cabling for customer premises	3080	Telecommunications installations—Generic cabling for commercial premises

Only international references that have been adopted as Australian or Australian/New Zealand Standards have been listed.

CONTENTS

	<i>Page</i>
1 Scope.....	1
2 Normative references	1
3 Terms and definitions	2
4 Reference measurement procedures for electrical properties	5
4.1 General	5
4.2 Test equipment considerations	5
4.3 DC loop resistance	11
4.4 Direct current (d.c.) resistance unbalance	12
4.5 Insertion loss.....	14
4.6 Propagation delay and delay skew	15
4.7 Near-end crosstalk (NEXT), pair to pair and power sum	17
4.8 Attenuation to crosstalk ratio (ACR), pair to pair and power sum	19
4.9 Far-end crosstalk (FEXT), pair to pair and power sum	20
4.10 Equal level far-end crosstalk (ELFEXT)	23
4.11 Return loss.....	23
4.12 Unbalance attenuation.....	25
4.13 Coupling attenuation	25
5 Field test measurement requirements for electrical properties	25
5.1 General	25
5.2 Cabling configurations tested	26
5.3 Field test parameters.....	26
5.4 Data reporting and accuracy.....	32
5.5 Field measurement procedures	38
6 Field tester measurement accuracy requirements	39
6.1 General	39
6.2 Measurement accuracy specifications common to level IIE, level III and level IV field testers.....	41
6.3 Accuracy performance requirements for level IIE field testers.....	41
6.4 Accuracy performance requirements for level III field testers	43
6.5 Accuracy performance requirements for level IV field testers.....	45
6.6 Procedures for determining field tester parameters	47
6.7 Measurement error models.....	55
6.8 Network analyser measurement comparisons	61
Bibliography.....	68
