AS/NZS CISPR 24:2002

Australian/New Zealand Standard™

**Information technology equipment—
Immunity characteristics—Limits and
methods of measurement**

AS/NZS CISPR 24:2002

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 2 October 2001 and on behalf of the Council of Standards New Zealand on 12 October 2001.
This Standard was published on 21 January 2002.

The following are represented on Committee TE-003:

Australian Broadcasting Authority
Australian Chamber of Commerce and Industry
Australian Communications Authority
Australian Competent Bodies Association Secretariat
Australian Electrical and Electronic Manufacturers Association
Australian Information Industry Association
Australian Subscription Television and Radio Association
Cable & Wireless Optus
Commonwealth Scientific and Industrial Research Organization
Consumer Electronics Suppliers Association
Department of Defence, Australia
Electrical Compliance Testing Association
Federation of Australian Commercial TV Stations
Institution of Engineers, Australia
Ministry of Economic Development, New Zealand
Society of Automotive Engineers, Australasia
Telstra Corporation
The IREE Society
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 00341.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference whose members were involved in its development as an International Standard.

This Standard incorporates Amendment No. 1 (September 2009) and Amendment No. 2 (September 2009). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected. The format of the document has also been updated to current style.

The objective of this Standard is to establish uniform requirements for the electromagnetic immunity of information technology equipment.

This Standard is identical with and has been reproduced from CISPR 24:1997, *Information technology equipment—Immunity characteristics—Limits and methods of measurement*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text 'this standard' should read 'this Australian/New Zealand Standard'.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The term 'normative' has been used in this Standard to define the application of the annex to which it applies. A 'normative' annex is an integral part of a Standard.

CONTENTS

	<i>Page</i>
1 Scope and object	1
2 Normative references	1
3 Definitions	3
4 Immunity test requirements	5
4.1 General	5
4.2 Particular requirements	5
5 Applicability	7
6 Conditions during testing	8
6.1 General conditions	8
6.2 Particular conditions (EUT operational modes, etc.)	9
6.3 Equipment set-up	9
7 Performance criteria	9
7.1 General performance criteria	9
7.2 Particular performance criteria	10
8 Product documentation	10
Annex A (normative) Telecommunications terminal equipment	13
Annex B (normative) Data processing equipment	28
Annex C (normative) Local area networks (LAN)	32
Annex D (normative) Printers	33
Annex E (normative) Copying machines	34
Annex F (normative) Automatic teller machines (ATM)	35
Annex G (normative) Point of sale terminals (POST)	37
