ISO 14119:2013

AS/NZS 4024.1602:2014

Australian/New Zealand Standard™

Safety of machinery

**Part 1602: Interlocking devices
associated with guards—Principles for
design and selection**

AS/NZS 4024.1602:2014

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee SF-041, General Principles for the Guarding of Machinery. It was approved on behalf of the Council of Standards Australia on 5 July 2014 and on behalf of the Council of Standards New Zealand on 24 April 2014. This Standard was published on 30 June 2014.

The following are represented on Committee SF-041:

Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Manufacturing Workers Union
Department of Mines and Petroleum, WA
Department of the Premier and Cabinet, SA
Engineers Australia
Federal Chamber of Automotive Industries
Human Factors and Ergonomics Society of Australia
Institute of Instrumentation, Control and Automation
National Safety Council of Australia
New Zealand Electrical Institute
NSW Department of Trade and Investment, Regional Infrastructure and Services
Safety Institute of Australia
University of Melbourne
Winery Engineering Association
WorkCover New South Wales
WorkSafe NZ
WorkSafe Victoria

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia Web Site at www.standards.org.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 4024.1602.

AS/NZS 4024.1602:2014

Australian/New Zealand Standard™

Safety of machinery

Part 1602: Interlocking devices associated with guards—Principles for design and selection

Originated in Australia as part of AS 4024.1(Int)—1992.
Previous edition AS 4024.1602—2006.
Jointly revised and designated as AS/NZS 4024.1602:2014.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee SF-041, General Principles for the Guarding of Machinery, to supersede AS 4024.1602—2006.

It is emphasized that this Standard is part of the AS(/NZS) 4024.1 series and it is imperative that it is used in conjunction with other applicable parts of the series. A complete listing of all current parts of the AS(/NZS) 4024.1 series can be found at the Standards Australia website <www.standards.org.au> and in AS/NZS 4024.1100, *Safety of machinery*, Part 1100: *Application Guide*.

The objective of this Standard is to specify the principles for the design and selection, independent of the energy source, of interlocking devices associated with guards. It provides measures to minimize defeat of interlocking devices in a reasonably foreseeable manner and it covers the parts of guards which actuate interlocking devices. It does not necessarily provide all the specific requirements for trapped key systems.

This Standard is identical with, and has been reproduced from ISO 14119:2013, *Safety of machinery—Interlocking devices associated with guards—Principles for design and selection*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text ‘this International Standard’ should read ‘this Australian/New Zealand Standard’.
- (b) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
ISO		AS/NZS

62061	Safety of machinery—Functional safety of safety-related electrical, electronic and programmable electronic control systems	62061	Safety of machinery—Functional safety of safety-related electrical, electronic and programmable electronic control systems

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

CONTENTS

1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Operating principles and typical forms of interlocking devices associated with guards	6
4.1	General	6
4.2	Principles of guard interlocking without guard locking	8
4.3	Principles of guard interlocking with guard locking	8
5	Requirements for the design and the installation of interlocking devices with and without guard locking	11
5.1	General	11
5.2	Arrangement and fastening of position switches	11
5.3	Arrangement and fastening of actuators	12
5.4	Actuation modes of interlocking devices	12
5.5	Interface to control systems	13
5.6	Mechanical stop	13
5.7	Additional requirements on guard locking devices	13
6	Selection of an interlocking device	18
6.1	General	18
6.2	Selection of a guard locking device	19
6.3	Environmental conditions considerations	21
7	Design to minimize defeat possibilities of interlocking devices	21
7.1	General	21
7.2	Additional measures to minimize defeat possibilities of interlocking devices	23
8	Control requirements	26
8.1	General	26
8.2	Assessment of faults	26
8.3	Prevention of common cause failures	27
8.4	Release of guard locking device	29
8.5	Fault exclusion	29
8.6	Logical series connection of interlocking devices	29
8.7	Electrical and environmental conditions	30
9	Information for use	30
9.1	General	30
9.2	Information for use given by the manufacturer of interlocking devices	30
9.3	Information for use given by the manufacturer of the machine	32
	Annex A (informative) Type 1 interlocking device — Examples	33
	Annex B (informative) Type 2 interlocking device — Examples	38
	Annex C (informative) Type 3 interlocking device — Example	43
	Annex D (informative) Type 4 interlocking devices — Examples	45
	Annex E (informative) Examples of other interlocking devices	48
	Annex F (informative) Example of guard locking devices	49
	Annex G (informative) Application examples of interlocking devices used within a safety function	55
	Annex H (informative) Motivation to defeat interlocking device	61
