Australian Standard™

Cathodic protection of metals

Part 3: Fixed immersed structures

This Australian Standard was prepared by Committee MT-014, Corrosion of Metals. It was approved on behalf of the Council of Standards Australia on 27 October 2005.

This Standard was published on 22 November 2005.

The following are represented on Committee MT-014:

Australasian Corrosion Association Australasian Institute of Metal Finishing Australian Chamber of Commerce and Industry Australian Electrolysis Committee Australian Paint Manufacturer's Federation Australian Paint Approval Scheme Austroads Bureau of Steel Manufacturers of Australia Department of Defence Division of Building, Construction and Engineering, CSIRO Galvanizers Association of Australia Telstra United Water International Water Corporation of Western Australia Corrosion consultants Water Services Association of Australia (WSAA)

Additional Interests:

Corrosion Consultants

Water Authority of Western Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards $^{\text{TM}}$ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 05048.

PREFACE

This Standard has been prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee MT-014, Corrosion of Metals, to supersede AS 2832.3—1992, Cathodic protection of metals, Part 3: Fixed immersed structures.

After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide Regulatory Authorities and the Australian corrosion mitigation industry with requirements for the cathodic protection of fixed immersed structures, such as wharves and piling, in order to minimize corrosion rates.

The objective of this revision is to specify the new design requirements for designing cathodic protection systems for fixed immersed structures.

This Standard is Part 3 of the AS 2832 series of Standards. The other parts are as follows:

AS

- 2832 Cathodic protection of metals
- 2832.1 Part 1: Pipes and cables
- 2832.2 Part 2: Compact buried structures
- 2832.4 Part 4: Internal surfaces
- 2832.5 Part 5: Steel in concrete structures

The Committee determined that there were no International Standards (ISO) which were suitable to be used as an Australian Standard.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, where an 'informative' appendix is only for information and guidance.
