Australian/New Zealand Standard™

Guide to hazardous paint management

Part 1: Lead and other hazardous metallic pigments in industrial applications

AS/NZS 4361.1:2017

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee CH-003, Paints and Related Materials. It was approved on behalf of the Council of Standards Australia on 6 August 2017 and by the New Zealand Standards Approval Board on 2 August 2017.

This Standard was published on 19 September 2017.

The following are represented on Committee CH-003:

Australasian Corrosion Association Australian Institute of Building Australian Paint Manufacturers Federation Australian Wall and Ceiling Association **CSIRO** Institution of Professional Engineers New Zealand Master Painters Australia Master Painters New Zealand Association NATA National Painting and Decorating Institute Surface Coatings Association Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com or Standards New Zealand web site at www.standards.govt.nz and looking up the relevant Standard in the online catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of Standards Australia or the New Zealand Standards Executive at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 4361.1:2017 CP.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee CH-003, Paint and Related Materials, to supersede AS 4361.1—1995, *Guide to lead paint management* Part 1: *Industrial applications*.

This Standard is Part 1 of the series of two parts providing guidance on the management of paints containing lead and other hazardous metallic pigments. The second part covers lead paint in residential, public and commercial building applications.

As part of the 2017 revision, the scope of this Standard has been widened to include other toxic metallic compounds (e.g. zinc chromate, arsenic and cadmium) that have at times been used in paints, in addition to lead, which was covered exclusively in the previous edition. Although the controls for most of these other toxicants are similar to those used to manage lead in paint, there are specific differences in toxicology and environmental impact that may require modifications to the general procedures of this Standard.

The objective of the Standard is to provide guidelines for the successful management of the disturbance or removal of paints containing hazardous metallic pigments used on industrial steel structures. This document may be referred to in state legislation dealing with the treatment of hazardous paints. However, when preparing for projects that involve the disturbance or removal of hazardous paints, the assistance of suitable experts is necessary.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is only for information and guidance.
