POWER TRANSFORMERS Part 4—TAPPINGS AND CONNECTIONS

[Title allocated by Defence Cataloguing Authority:
TRANSFORMER, POWER (Tappings and Connections)... NSC 5950, 6120]

STANDARDS ASSOCIATION OF AUSTRALIA
Incorporated by Royal Charter

This Australian standard, prepared by Committee EL/8, Static Electrical Machinery, was approved on behalf of the Council of the Standards Association of Australia on 8 June 1982 and published on 9 August 1982.

The following interests were represented on the committee responsible for the preparation of this standard:

- Australian-British Trade Association
- Australian Electrical and Electronic Manufacturers Association
- Confederation of Australian Industry
- Defence Standardization Committee
- Electrical testing laboratories
- Electricity Supply Association of Australia
- Electricity Supply Engineers Association of N.S.W.
- Institution of Engineers, Australia
- Railways of Australia Committee

To keep abreast of progress in industry, Australian standards are subject to continuous review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that standards users ensure that their standards are up-to-date. Full details of all SAA publications will be found in the Annual List of Australian Standards; these details are supplemented by listings in the SAA monthly journal 'The Australian Standard'. Information on the Annual List and 'The Australian Standard' may be obtained from any sales office of the Association, where details are also available of the current status of individual standards. Suggestions for improvements to published standards, addressed to the head office of the Association, are welcomed.

This standard was issued in draft form for comment as DR 81313.

PREFACE

This standard was prepared by the Association's Committee on Static Electrical Machinery. It is based closely on IEC 76—4, Power Transformers, Part 4: Tappings and Connections and is Part 4 of a six-part standard that supersedes AS C61—1970, Power Transformers.

The other Parts of the standard are—

- Part 1—General Requirements
- Part 2—Temperature Rise
- Part 3—Insulation Levels and Dielectric Tests
- Part 5—Ability to Withstand Short Circuit
- Part 6—Sound Levels

Where the draft differs from IEC 76—4 and changes have been made to meet Australian requirements, these changes are indicated by a rule in the margin.

This standard requires reference to the other parts of AS 2374 as shown above.

CONTENTS

	<i>Page</i>
SECTION 1. SCOPE AND DEFINITIONS	
1.1 Scope	3
1.2 Definitions	3
SECTION 2. TAPPINGS	
2.1 Requirements Valid for all Categories of Voltage Variation	4
2.2 Definition and Additional Requirements for Constant Flux Voltage Variation	4
2.3 Definition and Additional Requirements for Variable Flux Voltage Variation	5
2.4 Definition and Additional Requirements for Combined Voltage Variation	5
SECTION 3. CONNECTIONS	
3.1 Connections of Phase Windings	6
3.2 Phase Displacement Between Windings	6
APPENDICES	
A Examples of Specifications for Transformers with Tappings	10
B Transformer Connections in General Use	12
C Designation of Windings, Assignment of Letters and Numbers to Winding Ends and Tappings, Marking and Position of Terminals, Vector Diagrams, Terminal Marking Plates and Connection Diagram Drawings	19

**Australian Standard
for
POWER TRANSFORMERS**

PART 4: TAPPINGS AND CONNECTIONS

SECTION 1. SCOPE AND DEFINITIONS

1.1 SCOPE. This standard specifies requirements for tappings and connections of transformers having only one tapped winding. For autotransformers, this means that the number of turns per phase in either the high-voltage (HV) or the low-voltage (LV) winding is constant.

NOTE: Autotransformers with tapped neutrals are subject to agreement.

Tap changing involving a phase displacement in the voltage is not taken into account.

1.2 DEFINITIONS. For the purpose of this standard the definitions given in AS 2374, Part 1, apply.
