

AS/NZS CISPR 16.1.4:2009
CISPR 16-1-4, Ed. 2.1 (2008)

AS/NZS CISPR 16.1.4:2009

Australian/New Zealand Standard™

**Specification for radio disturbance and
immunity measuring apparatus and
methods**

**Part 1.4: Radio disturbance and
immunity measuring apparatus—
Ancillary equipment—Radiated
disturbances**

AS/NZS CISPR 16.1.4:2009

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 12 June 2009 and on behalf of the Council of Standards New Zealand on 26 June 2009.

This Standard was published on 21 August 2009.

The following are represented on Committee TE-003:

Association of Consulting Engineers Australia
Australian Broadcasting Corporation
Australian Chamber of Commerce and Industry
Australian Communications and Media Authority
Australian Industry Group
Australian Information Industry Association
Australian Subscription Television and Radio Association
Consumer Electronics Suppliers Association
Department of Defence (Australia)
Electrical Compliance Testing Association
Energy Networks Association
Engineers Australia
Free TV Australia
Ministry of Economic Development (New Zealand)
National Measurement Institute
SingTel Optus Pty Limited
Society of Automotive Engineers- Australasia
Telstra Corporation Limited
University of Western Australia
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 09025.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference to supersede AS/NZS CISPR 16.1.4:2004, as one of a series of Standards intended to facilitate control of electromagnetic interference and the compatibility of electrical and electronic equipment.

The objective of this Standard is to provide the characteristics and performance of equipment for the measurement of radiated disturbances in the frequency range 9 kHz to 18 GHz.

This Standard is identical with, and has been reproduced from, CISPR 16-1-4, Ed. 2.1 (2008), *Specification for radio disturbance and immunity measuring apparatus and methods, Part 1.4: Radio disturbance and immunity measuring apparatus—Ancillary equipment—Radiated disturbances*. Edition 1.1 is a consolidated version based on the first edition (2003) and its amendment 1 (2004).

This Standard is Part 1.4 of AS/NZS CISPR 16.1, *Specification for radio disturbance and immunity measuring apparatus and methods*, which consists of the following:

- Part 1.1: Radio disturbance and immunity measuring apparatus—Measuring apparatus
- Part 1.2: Radio disturbance and immunity measuring apparatus—Ancillary equipment—Conducted disturbances
- Part 1.3: Radio disturbance and immunity measuring apparatus—Ancillary equipment—Disturbance power
- Part 1.4: Radio disturbance and immunity measuring apparatus—Ancillary equipment—Radiated disturbances (this Standard)
- Part 1.5: Radio disturbance and immunity measuring apparatus—Antenna calibration test sites for 30 MHz to 1000 MHz

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this part of CISPR 16’ should read ‘this part of AS/NZS CISPR 16’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ are used to define the application of the Annex to which it applies. A normative annex is an integral part of a Standard, whereas an informative Annex is only for information and guidance.

CONTENTS

	<i>Page</i>
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Antennas for measurement of radiated radio disturbance	5
4.1 Physical parameter for radiated emissions measurements	5
4.2 Frequency range 9 kHz to 150 kHz	6
4.3 Frequency range 150 kHz to 30 MHz	6
4.4 Frequency range 30 MHz to 1 000 MHz	7
4.5 Frequency range 1 GHz to 18 GHz	11
4.6 Special antenna arrangements	11
5 Test sites for measurement of radio disturbance field strength for the frequency range of 30 MHz to 1 000 MHz	12
5.1 Open area test site	12
5.2 Weather protection enclosure	12
5.3 Obstruction-free area	12
5.4 Ambient radio frequency environment of a test site	13
5.5 Ground plane	15
5.6 Open area site validation procedure	15
5.7 Test site suitability with ground-plane	19
5.8 Test site suitability without ground-plane	24
5.9 Evaluation of set-up table and antenna tower	33
6 Reverberating chamber for total radiated power measurement	35
6.1 Chamber	35
7 TEM cells for immunity to radiated disturbance measurement	38
8 Test sites for measurement of radio disturbance field strength for the frequency range 1 GHz to 18 GHz	38
8.1 Reference test site	38
8.2 Validation of the test site	38
8.3 Alternative test site	51
9 Common mode absorption devices	51
9.1 General	51
9.2 CMAD S-parameter measurements	51
9.3 CMAD test jig	52
9.4 Measurement method using the TRL calibration	52
9.5 CMAD performance (degradation) check using spectrum analyser (SA) and tracking generator (TG)	53
Annex A (normative) Parameters of antennas	58
Annex B (normative) Monopole (1 m rod antenna) performance equations and characterization of the associated antenna matching network)	65
Annex C (normative) Loop antenna system for magnetic field induced current measurements in the frequency range of 9 kHz to 30 MHz	70
Annex D (informative) Construction details for open area test sites in the frequency range of 30 MHz to 1 000 MHz (Clause 5)	79
