

AS/NZS 60079.15:2006
IEC 60079-15, Ed. 3 (2005)
(Incorporating Amendment No. 1)

AS/NZS 60079.15:2006

Australian/New Zealand Standard™

Electrical apparatus for explosive gas atmospheres

Part 15: Construction, test and marking of type of protection, 'n' electrical apparatus

AS/NZS 60079.15:2006

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-014, Electrical Equipment in Hazardous Areas. It was approved on behalf of the Council of Standards Australia on 14 December 2005 and on behalf of the Council of Standards New Zealand on 21 December 2005.
This Standard was published on 16 January 2006.

The following are represented on Committee EL-014:

Association of Consulting Engineers Australia
Auckland Regional Chamber of Commerce
Australian Chamber of Commerce and Industry
Australian Coal Association
Australian Electrical and Electronic Manufacturers Association
Australian Industry Group
Australian Institute of Petroleum
Australian Institute of Refrigeration Air Conditioning and Heating (Inc)
Australian Petroleum Production and Exploration Association
Certification Interests (Australia)
Committee EL-023
Department of Natural Resources and Mines (Qld)
Department of Primary Industries, Mine Safety (NSW)
Electrical Regulatory Authorities Council
Energy Networks Association
Engineers Australia
Institute of Electrical Inspectors
Institute of Instrumentation, Control and Automation Australia
Mining Electrical and Mining Mechanical Engineering Society
Ministry of Economic Development (New Zealand)
National Electrical and Communications Association
New Zealand Association of Marine, Aviation and Power Engineers
New Zealand Employers and Manufacturers Association
New Zealand Hazardous Areas Electrical Coordinating Committee
WorkCover New South Wales

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 05381.

AS/NZS 60079.15:2006
(Incorporating Amendment No. 1)

Australian/New Zealand Standard™

Electrical apparatus for explosive gas atmospheres

**Part 15: Construction, test and marking
of type of protection, 'n' electrical
apparatus**

Originated as AS 2238—1979.
Second edition 1982.
Revised and redesignated AS 2380.9—1991.
Jointly revised and redesignated AS/NZS 60079.15:2006.
Reissued incorporating Amendment No. 1 (December 2006).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-014, Electrical Equipment in Hazardous Areas; it will supersede AS 2380.9—1991, *Electrical equipment for explosive atmospheres—Explosion protection techniques Part 9: Type of protection n—Non-sparking* two years from publication.

This Standard incorporates Amendment No. 1 (December 2006). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

This Standard is identical with, and has been reproduced from IEC 60079-15, Ed. 3 (2005), *Electrical apparatus for explosive gas atmospheres – Part 15: Construction, test and marking of type of protection, “n” electrical apparatus*.

The objective of this Standard is to specify requirements for the construction, test and marking of Group II electrical apparatus with type of protection ‘n’, intended for use in explosive gas atmospheres.

This Standard will run concurrently with AS 2380.9—1991, *Electrical equipment for explosive atmospheres—Explosion protection techniques Part 9: Type of protection n—Non-sparking* for two years from publication; after two years, AS 2380.9—1991 will be withdrawn.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this part of IEC 60079’ should read ‘this part of AS/NZS 60079’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

CONTENTS

	<i>Page</i>
1 Scope	1
2 Normative references	4
3 Terms and definitions	6
4 General	8
4.1 Apparatus grouping and temperature classification	8
4.2 Potential ignition sources	9
5 Temperatures	9
5.1 Environmental influences	9
5.2 Service temperature	9
5.3 Maximum surface temperature	9
5.4 Surface temperature and ignition temperature	9
5.5 Small components	9
6 Requirements for electrical apparatus	10
6.1 General	10
6.2 Mechanical strength of apparatus	10
6.3 Opening times	10
6.4 Circulating currents	10
6.5 Gasket retention	10
6.6 Degree of protection of enclosure (IP)	10
6.7 Clearances, creepage distances and separations	11
6.8 Electric strength	18
7 Non-metallic enclosures and non-metallic parts of enclosures	19
7.1 General	19
7.2 Thermal endurance	19
7.3 Electrostatic charges on external non-metallic materials of enclosures	19
7.4 Threaded holes	19
7.5 Thermal shock	19
7.6 Resistance to light	19
8 Enclosures containing light metals	19
8.1 Material composition	19
8.2 Threaded holes	19
9 Fasteners	20
9.1 General	20
9.2 Special fasteners	20
10 Interlocking devices	20
11 Bushings	20
12 Materials used for cementing	20
13 Ex components	20
13.1 Type of protection “n”	20
13.2 Mounting	20
13.3 Internal mounting	21
13.4 External mounting	21
