ELECTROTECHNICAL  
VOCABULARY**

**Chapter 131—ELECTRIC AND  
MAGNETIC  
CIRCUITS**

---

This Australian Standard was prepared by Committee TE/13, Symbols, Units & Quantities for Electrotechnology. It was approved on behalf of the Council of the Standards Association of Australia on 15 March 1988 and published on 17 June 1988.

---

The following interests are represented on Committee TE/13:

Australian Electrical and Electronic Manufacturers Association  
Confederation of Australian Industry  
Department of Administrative Services—Construction Group (Commonwealth)  
Department of Defence  
Department of Technical and Further Education, N.S.W., Victoria and  
South Australia  
Department of Transport and Communications (Commonwealth)  
Electricity Supply Association of Australia  
Institute of Draftsmen, Australia  
Institution of Radio and Electronics Engineers, Australia  
Melbourne & Metropolitan Board of Works  
Queensland Chamber of Mines  
Railways of Australia Committee  
Royal Melbourne Institute of Technology  
Telecom Australia  
The Association of Consulting Engineers, Australia  
The technical press

**Review of Australian Standards.** *To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

*Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.*

*Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.*

## PREFACE

This Standard was prepared by the Association's Committee on Symbols, Units and Quantities for Electrotechnology, under the authority of both the Telecommunications and Electronics Standards Board and the Electrical Standards Board, to supersede AS 1852(131)—1978 and AS 1852(131-04) — 1983. This Standard also supersedes, in part, AS 1852(05)—1970, *International Electrotechnical Vocabulary, Fundamental definitions*, which was withdrawn with the publication of AS 1852(131-04) and other chapters of the IEC in 1983.

This Standard is identical with and has been reproduced from IEC 50(131)—1978, IEC 50(131A)—1982 and Amendment No 1—1984 to IEC 50(131). Acknowledgement is accordingly made to the International Electrotechnical Commission for this assistance.

This edition of this Standard includes Amendment No 1—1984 to IEC 50(131) and incorporates Section-04 which was previously published separately to the other three sections of Chapter 131.

This standard is one of the AS 1852 series of Standards. In the past, this series has consisted of direct endorsements of the IEC 50 series of the International Electrotechnical Vocabulary. In future, newly issued parts of IEC 50, where appropriate, will be issued as Australian Standards, i.e. not endorsements. The full text of the definitions in English, French and Russian has been included as some definitions are considered to be incomplete when produced in one language.

The purpose of the AS 1852 series is to provide a glossary of terms used in electrical engineering. The series lists terms in English, French and Russian, and in some cases Spanish. It is intended that other Australian Standards will refer to AS 1852 and not repeat any definitions.

### © Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

**Australian Standard**

**INTERNATIONAL ELECTROTECHNICAL VOCABULARY**

**CHAPTER 131—ELECTRIC AND MAGNETIC CIRCUITS**

---

**SECTION 131-01—GENERAL**

**131-01-01****circuit électrique**

Ensemble de dispositifs ou de milieux dans lesquels peuvent circuler des courants électriques.

*Note.* — Voir « circuit électrique équivalent » en 131-01-33.

**electric circuit**

An arrangement of devices or media through which electric current can flow.

*Note.* — See “equivalent electric circuit” in 131-01-33.

**электрическая цепь**

Совокупность устройств или сред, в которых могут протекать электрические токи.

*Примечание.* — Смотри « электрическая эквивалентная схема » (131-01-33).

**131-01-02****borne****pôle (déconseillé dans ce sens)**

Point d'un circuit électrique destiné à établir une connexion.

**terminal**

A point of an electric circuit, intended for making a connection.

**зажим**

полюс (не рекомендуется применять в этом смысле)

Точка электрической цепи, предназначенная для выполнения соединения.

**131-01-03****multipôle**

Circuit électrique à  $n$  bornes.

 **$n$ -terminal circuit**

An electric circuit having  $n$  terminals.

 **$n$ -полюсник**

Электрическая цепь с  $n$  зажимами.

**131-01-04****bipôle****dipôle (déconseillé dans ce sens)**

Circuit électrique à deux bornes.

**2-terminal circuit**

An electric circuit having two terminals.

**двухполюсник**

Электрическая цепь с двумя зажимами.
