

AS 1217.5—1985

Australian Standard[®]

**ACOUSTICS—DETERMINATION
OF SOUND POWER LEVELS OF
NOISE SOURCES**

**Part 5—ENGINEERING
METHODS FOR
FREE-FIELD
CONDITIONS OVER A
REFLECTING PLANE**

This Australian standard was prepared by Committee AK/2, Techniques for Measurement. It was approved on behalf of the Council of the Standards Association of Australia on 30 August 1984 and published on 4 April 1985.

The following interests are represented on Committee AK/2:

Australian Acoustical Society

CSIRO, Division of Building Research

CSIRO, National Measurement Laboratory

Department of Aviation

Department of Industrial Relations, N.S.W.

Department of Housing and Construction

Environment Protection Authority of Victoria

Metal Trades Industry Association of Australia

National Acoustic Laboratories

Telecom Australia

University of Adelaide

University of Queensland

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 82157.

PREFACE

This standard was prepared by the Association's Committee on Techniques for Measurement. It supersedes AS 1217 — 1972, Methods of Measurement of Airborne Sound Emitted by Machines.

This standard is based on ISO 3744 — 1981, Acoustics—Determination of Sound Power Levels of Noise Sources—Engineering Methods for Free-field Conditions Over a Reflecting Plane.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

CONTENTS

	<i>Page</i>
FOREWORD	5
SECTION 1. SCOPE AND GENERAL	
1.1 Scope	7
1.2 Field of Application	7
1.3 Referenced Documents	7
1.4 Measurement Uncertainty	7
1.5 Definitions	8
SECTION 2. ACOUSTIC ENVIRONMENT	
2.1 General	8
2.2 Criteria for Adequacy of the Test Environment	8
2.3 Criterion for Background Noise	8
SECTION 3. INSTRUMENTATION	
3.1 General	9
3.2 The Microphone and Its Associated Cable	9
3.3 Frequency Response of the Instrumentation System	9
3.4 Weighting Network, Frequency Analyser	9
3.5 Calibration	9
SECTION 4. INSTALLATION AND OPERATION OF SOURCE	
4.1 General	10
4.2 Source Position	10
4.3 Source Mounting	10
4.4 Auxiliary Equipment	10
4.5 Operation of Source During Test	10
SECTION 5. SOUND PRESSURE LEVELS ON MEASUREMENT SURFACE	
5.1 Measurement Surface	11
5.2 Additional Microphone Positions on Measurement Surface	12
5.3 Reduction of Number of Microphone Positions	12
5.4 Conditions of Measurement	13
SECTION 6. CALCULATION OF SOUND SURFACE PRESSURE LEVEL, SOUND POWER LEVEL, AND DIRECTIVITY FACTOR	
6.1 Calculation of Sound Pressure Level Averaged Over the Measurement Surface	14
6.2 Calculation of Surface Sound Pressure Level	14
6.3 Calculation of Sound Power Level	14
6.4 Calculation of Directivity Index and Directivity Factor	14
SECTION 7. INFORMATION TO BE RECORDED AND REPORTED	
7.1 General	15
7.2 Sound Source Under Test	15
7.3 Acoustic Environment	15
7.4 Instrumentation	15
7.5 Acoustical Data	15
7.6 Information to be Reported	15
APPENDICES	
A Qualification Procedures for the Acoustic Environment	16
B Microphone Array on the Hemisphere	19
C Microphone Array on the Parallelepiped Measuring Surface	21
