IEC 62054-11, Ed.1.0 (2004)

AS 62054.11—2006

Australian Standard™

**Electricity metering (ac)—Tariff and load  
control**

**Part 11: Particular requirements for  
electronic ripple control receivers**

This Australian Standard was prepared by Committee EL-011, Electricity Metering Equipment. It was approved on behalf of the Council of Standards Australia on 19 January 2006.

This Standard was published on 10 February 2006.

---

The following are represented on Committee EL-011:

Australian Chamber of Commerce and Industry  
Australian Electrical and Electronic Manufacturers Association  
Electrical Regulatory Authorities Council  
Electricity Engineers Association (New Zealand)  
Energy Networks Association  
Engineers Australia  
Ministry of Economic Development (New Zealand)  
NEMMCO  
National Measurement Institute

---

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at [www.standards.com.au](http://www.standards.com.au) and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

---

*This Standard was issued in draft form for comment as DR 05137.*

AS 62054.11—2006

Australian Standard™

## **Electricity metering (ac)—Tariff and load control**

### **Part 11: Particular requirements for electronic ripple control receivers**

Originated as AS 1284.6—1992.  
Revised and redesignated as AS 62054.11—2006.

## PREFACE

This Standard was prepared by the joint Standards Australia/Standards New Zealand Committee EL-011, Electricity Metering Equipment to supersede AS 1284.6, *Electricity metering—Ripple control receivers for tariff and load control*. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian, rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide electricity utilities and manufacturers with requirements and tests for ripple control receivers.

This Standard is identical with, and has been reproduced from IEC 62054-11, Ed.1.0 (2004), *Electricity metering (ac)—Tariff and load control—Part 11: Particular requirements for electronic ripple control receivers*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this part of IEC 62054’ should read ‘AS 62054.11’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

# CONTENTS

	<i>Page</i>
INTRODUCTION .....	iv
1 Scope .....	1
2 Normative references .....	1
3 Terms and definitions .....	2
4 Standard electrical values .....	2
5 Mechanical requirements and tests .....	2
5.1 Operation status indicator .....	2
6 Climatic conditions, requirements and tests .....	2
7 Electrical requirements and tests .....	2
7.1 Supply voltage .....	2
7.2 Heating .....	3
7.3 Insulation .....	3
7.4 Output elements .....	3
7.5 Functional requirements and tests – Control performance .....	3
7.6 Electromagnetic compatibility (EMC) .....	5
7.7 Radio interference suppression .....	11
8 Test conditions and type test .....	11
Annex A (normative) Harmonic levels for testing ripple control receivers .....	12
Annex B (normative) Selection of frequency for tests with harmonics .....	13
Annex C (normative) Combination of parameters for operation and non-operation tests .....	14
Annex D (informative) Acceptance tests .....	15
Annex E (informative) Code terms .....	16
Annex F (informative) Example of a test configuration for operation and non-operation tests and for measurement of disturbance-limit curves .....	17
Annex G (informative) Values of the influence quantities for the different tests .....	18
Figure B.1 – Examples for selection of the frequency $H_c$ .....	13
Figure B.2 – Frequency deviations for measurement of the disturbance-limit curves .....	13
Figure F.1 – Test configuration .....	17
Table A.1 – Recommended values for 50 Hz networks .....	12
Table C.1 – Combination of parameters .....	14
