

Australian/New Zealand Standard™

**Information technology equipment—
Radio disturbance characteristics—
Limits and methods of measurement**

AS/NZS CISPR 22:2009

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 12 June 2009 and on behalf of the Council of Standards New Zealand on 26 June 2009.

This Standard was published on 21 August 2009.

The following are represented on Committee TE-003:

Association of Consulting Engineers Australia
Australian Broadcasting Corporation
Australian Chamber of Commerce and Industry
Australian Communications and Media Authority
Australian Industry Group
Australian Information Industry Association
Australian Subscription Television and Radio Association
Consumer Electronics Suppliers Association
Department of Defence (Australia)
Electrical Compliance Testing Association
Energy Networks Association
Engineers Australia
Free TV Australia
Ministry of Economic Development (New Zealand)
National Measurement Institute
SingTel Optus Pty Limited
Society of Automotive Engineers- Australasia
Telstra Corporation Limited
University of Western Australia
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 09024.

AS/NZS CISPR 22:2009
(Incorporating Amendment No. 1)

Australian/New Zealand Standard™

**Information technology equipment—
Radio disturbance characteristics—
Limits and methods of measurement**

Originated as AS/NZS CISPR 22:2006.
Second edition 2009.
Reissued incorporating Amendment No. 1 (December 2010).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference to supersede AS/NZS CISPR 22:2006, as one of a series of Standards intended to facilitate control of electromagnetic interference and the compatibility of electrical and electronic equipment.

This Standard incorporates Amendment No. 1 (December 2010). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to specify uniform requirements for the radio disturbance level of the equipment contained in the scope, to fix limits of disturbance, to describe methods of measurement and to standardize operating conditions and interpretation of results.

A1 | This Standard is identical with, and has been reproduced from, CISPR 22, Ed. 6.0 (2008), *Information technology equipment—Radio disturbance characteristics—Limits and methods of measurement*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this International Standard’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ are used to define the application of the Annex to which it applies. A normative annex is an integral part of a Standard, whereas an informative Annex is only for information and guidance.

CONTENTS

	<i>Page</i>
Introduction	v
1 Scope and object	1
2 Normative references	1
3 Definitions	3
4 Classification of ITE	4
4.1 Class B ITE	4
4.2 Class A ITE	5
5 Limits for conducted disturbance at mains terminals and telecommunication ports	5
5.1 Limits of mains terminal disturbance voltage	5
5.2 Limits of conducted common mode (asymmetric mode) disturbance at telecommunication ports)	6
6 Limits for radiated disturbance	7
6.1 Limits below 1 GHz	7
6.2 Limits above 1 GHz	7
6.3 Conditional testing procedure:	8
7 Interpretation of CISPR radio disturbance limit	8
7.1 Significance of a CISPR limit	8
7.2 Application of limits in tests for conformity of equipment in series production	8
8 General measurement conditions	9
8.1 Ambient noise	9
8.2 General arrangement	10
8.3 EUT arrangement	12
8.4 Operation of the EUT	14
9 Method of measurement of conducted disturbance at mains terminals and telecommunication ports	15
9.1 Measurement detectors	15
9.2 Measuring receivers	16
9.3 Artificial mains network (AMN)	16
9.4 Ground reference plane	16
9.5 EUT arrangement	16
9.6 Measurement of disturbances at telecommunication ports	18
9.7 Recording of measurements	22
10 Method of measurement of radiated disturbance	22
10.1 Measurement detectors	22
10.2 Measuring receiver below 1 GHz	22
10.3 Antenna below 1 GHz	22
10.4 Measurement site below 1 GHz	23
10.5 EUT arrangement below 1 GHz	24
10.6 Radiated emission measurements above 1 GHz	24
10.7 Recording of measurements	25
10.8 Measurement in the presence of high ambient signals	25
10.9 User installation testing	25
11 Measurement uncertainty	26
Annex A (normative) Site attenuation measurements of alternative test sites	38
