**Electromagnetic compatibility (EMC)** 

Part 3.15: Limits—Assessment of low frequency electromagnetic immunity and emission requirements for dispersed generation systems in LV network

#### SA/SNZ TR IEC 61000.3.15:2013

This Joint Australian/New Zealand Technical Report was prepared by Joint Technical Committee EL-034, Power Quality. It was approved on behalf of the Council of Standards Australia on 24 May 2013 and on behalf of the Council of Standards New Zealand on 24 May 2013.

This Technical Report was published on 3 July 2013.

The following are represented on Committee EL-034:

Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Information Industry Association
Bureau of Steel Manufacturers of Australia
Consumer Electronics Suppliers Association
Consumers Federation of Australia
Electrical Regulatory Authorities Council
Electricity Engineers Association, New Zealand
Energy Networks Association
Engineers Australia
Lighting Council of Australia
Ministry of Economic Development, New Zealand
National Measurement Institute

New Zealand Coordinating Committee on Power & Telecommunication Systems

New Zealand Electric Fence Energiser Manufacturers Standards WG

University of Canterbury, New Zealand

University of Wollongong

### Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Technical Report was issued in draft form for comment as DR TR IEC 61000.3.15.

#### **PREFACE**

This Technical Report was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-034, Power Quality.

The objective of this Technical Report is to assess existing Standards for single and multi-phase dispersed generation systems up to 75 A per phase, to serve as a starting point and to ultimately pave the way for the definition of appropriate electromagnetic compatibility requirements and test conditions. This Technical Report is limited to EMC issues (immunity and emission) up to 9 kHz.

This Technical Report is identical with, and has been reproduced from IEC/TR 61000-3-15, Ed.1.0 (2011), Electromagnetic compatibility (EMC), Part 3-15: Limits—Assessment of low frequency electromagnetic immunity and emission requirements for dispersed generation systems in LV network. The IEC processes related to development and approval of a Technical Report are subject to a more moderate level of transparency and consensus than the processes related to developing and approving a normative Standard.

As this Technical Report is reproduced from an International Technical Report, the following applies:

- (a) In the source text 'this part of IEC 61000' should read 'this Technical Report'.
- (b) A full point substitutes for a comma when referring to a decimal marker.

The term 'informative' has been used in this Technical Report to define the application of the annex to which it applies. An 'informative' annex is only for information and guidance.

## **CONTENTS**

1	Scope					
2	Terms and definitions					
3	General					
4	Classification of DG generators					
	4.1	-				
	4.2					
	4.3	, .				
	4.4	•				
5	Surv	vey of EMC requirements for DG				
6	Proposed EMC requirements and tests					
	6.1					
	6.2	·				
7	Emission					
	7.1	Gener	al	18		
	7.2		onics			
		7.2.1	Mechanisms of harmonic current emissions	18		
		7.2.2	Proposed limits and tests for harmonic current emissions	19		
		7.2.3	Summary of harmonic current emission tests			
		7.2.4	Product test procedure for harmonic current emissions	21		
		7.2.5	System test procedure for harmonic current emissions	23		
	7.3	Unbalance				
	7.4	Voltag	e fluctuation and flicker	24		
		7.4.1	General	24		
		7.4.2	Flicker test conditions for DG equipment exporting power to the			
		50	public supply			
	7.5	DC injection				
	7.6		Short duration over voltages			
		7.6.1 7.6.2	General			
	77		Short duration over voltage test procedure			
8	7.7		•			
O	Immunity					
		8.1 General				
	8.2	8.2.1	ge dips and short interruptions			
		8.2.2	Short duration voltage dips test procedure			
		8.2.3	Longer duration voltage dips test procedure			
	8.3	8.3 Frequency variations				
	8.4 Harmonics and interharmonics					
An	• • •		ative) Examples of harmonic measurements and analysis on DG			
			ected to low voltage networks	41
