

## **Electromagnetic compatibility (EMC)**

### **Part 4.5: Testing and measurement techniques—Surge immunity test**

This Australian Standard® was prepared by Committee TE-003, Electromagnetic Compatibility. It was approved on behalf of the Council of Standards Australia on 6 April 2017.

This Standard was published on 24 May 2017.

---

The following are represented on Committee TE-003:

- Australian Communications and Media Authority
  - Australian Industry Group
  - Australian Information Industry Association
  - Consumer Electronics Suppliers Association
  - Curtin University of Technology
  - Department of Defence (Australian Government)
  - Electrical Compliance Testing Association
  - EMC Society of Australia
  - Energy Networks Australia
  - Engineers Australia
  - Free TV Australia
  - Wireless Institute Australia
- 

This Standard was issued in draft form for comment as DR AS IEC 61000.4.5:2017.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

---

### **Keeping Standards up-to-date**

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting [www.standards.org.au](http://www.standards.org.au)

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

## PREFACE

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Compatibility, to supersede AS/NZS 61000.4.5:2006, *Electromagnetic compatibility (EMC), Part 4.5: Testing and measurement technique—Surge immunity test*. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide guidance in relation to the immunity requirements, test methods, and range of recommended test levels for equipment with regard to unidirectional surges caused by over-voltages from switching and lightning transients.

This Standard is identical with, and has been reproduced from IEC 61000-4-5:2014 (ED.3.0), *Electromagnetic compatibility (EMC), Part 4-5: Testing and measurement techniques—Surge immunity test*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text ‘this part of 61000’ should read ‘this Australian Standard’.
- (b) A full point substitutes for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the annex to which they apply. A ‘normative’ annex is an integral part of a Standard, whereas an ‘informative’ annex is only for information and guidance.

## CONTENTS

1	Scope and object.....	9
2	Normative references .....	9
3	Terms, definitions and abbreviations .....	10
3.1	Terms and definitions.....	10
3.2	Abbreviations.....	13
4	General .....	13
4.1	Power system switching transients.....	13
4.2	Lightning transients.....	14
4.3	Simulation of the transients.....	14
5	Test levels.....	14
6	Test instrumentation .....	15
6.1	General.....	15
6.2	1,2/50 $\mu$ s combination wave generator .....	15
6.2.1	General .....	15
6.2.2	Performance characteristics of the generator.....	16
6.2.3	Calibration of the generator .....	18
6.3	Coupling/decoupling networks.....	19
6.3.1	General .....	19
6.3.2	Coupling/decoupling networks for a.c./d.c. power port rated up to 200 A per line .....	20
6.3.3	Coupling/decoupling networks for interconnection lines .....	24
6.4	Calibration of coupling/decoupling networks.....	27
6.4.1	General .....	27
6.4.2	Calibration of CDNs for a.c./d.c. power port rated up to 200 A per line .....	27
6.4.3	Calibration of CDNs for interconnection lines.....	28
7	Test setup .....	30
7.1	Test equipment .....	30
7.2	Verification of the test instrumentation .....	31
7.3	Test setup for surges applied to EUT power ports .....	31
7.4	Test setup for surges applied to unshielded unsymmetrical interconnection lines .....	32
7.5	Test setup for surges applied to unshielded symmetrical interconnection lines.....	32
7.6	Test setup for surges applied to shielded lines.....	32
8	Test procedure .....	33
8.1	General.....	33
8.2	Laboratory reference conditions .....	34
8.2.1	Climatic conditions .....	34
8.2.2	Electromagnetic conditions .....	34
8.3	Execution of the test .....	34
9	Evaluation of test results .....	35
10	Test report.....	35
