Australian/New Zealand Standard

Guide to the safe use of lasers in health care

AS/NZS 4173:1994

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee HT/28, Lasers in Medical Procedures. It was approved on behalf of the Council of Standards Australia on 5 November 1993 and on behalf of the Council of Standards New Zealand on 29 April 1993. It was published on 14 February 1994.

The following interests are represented on Committee HT/28:

Australasian College of Dermatologists Australasian College of Physical Scientists and Engineers in Medicine Australian and New Zealand College of Anaesthetists Australian Centre of Medical Laser Technology Australian Confederation of Operating Room Nurses Australian Radiation Protection Association Commonwealth Department of Health, Housing and Community Services, Australia Department of Health, N.S.W. Department of Health and Community Services, Vic Health Department, W.A. Institute of Biomedical Engineering, Australia Medical Industry Association of Australia Ministry of Commerce, New Zealand National Health and Medical Research Council, Australia Royal Australasian College of Obstetricians and Gynaecologists Royal Australasian College of Physicians Royal Australian College of Ophthalmologists University of Waikato, New Zealand

Additional interests participating in preparation of Standard:

Laser equipment manufacturers and suppliers Royal Adelaide Hospital

Review of Standards. To keep abreast of progress in industry, Joint Australian/ New Zealand Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Joint Standards and related publications will be found in the Standards Australia and Standards New Zealand Catalogue of Publications; this information is supplemented each month by the magazines 'The Australian Standard' and 'Standards New Zealand', which subscribing members receive, and which give details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Joint Standards, addressed to the head office of either Standards Australia or Standards New Zealand, are welcomed. Notification of any inaccuracy or ambiguity found in a Joint Australian/New Zealand Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 91054.

Australian/New Zealand Standard

Guide to the safe use of lasers in health care

First published as Joint Standard AS/NZS 4173:1994.

PUBLISHED JOINTLY BY:

STANDARDS NEW ZEALAND Level 10, Standards House, 155 The Terrace, Wellington 6001 New Zealand

PREFACE

This Standard was prepared by the Joint Australian/New Zealand Standards Committee HT/28 on Lasers in Medical Procedures and is issued as a joint Standard under the terms of the Active Cooperation Agreement between Standards Australia and Standards New Zealand.

The Standard provides guidance in the safe use of lasers and laser systems for diagnostic and therapeutic uses in health care facilities (including hospitals, private medical facilities and dental practices). To this end, it includes explanations of basic laser physics and radiation/tissue interactions, and also identifies engineering and administrative control measures designed to avoid the most significant hazards. Protocols to be observed during specialist medical and dental procedures are also included.

It is not intended that the recommended control measures should restrict or limit the use of laser radiation which may be intentionally administered to a patient for diagnostic, therapeutic, surgical or medical research purposes. However, the controls are those considered necessary for the safety of all attending staff, as well as those which should be considered as fundamental to patient safety.

This Standard was prepared in the knowledge that separate Standards were being developed for medical laser equipment (to supplement the safety procedures and requirements of AS 2211/NZS 5821, *Laser safety*) and for medical laser installations. These Standards will incorporate mandatory engineering and installation requirements to be observed by the manufacturers and constructors. Accordingly, this Standard concentrates on identifying those administrative needs and user precautions which are of equal importance. In particular, the importance of staff training is emphasized and this Standard—

- (a) identifies appropriate levels of staff training (i.e. not all staff need to be trained to the same level);
- (b) recommends that relevant educational organizations insist on formal medical laser training and certification of post-graduate specialists; and
- (c) notes the medical laser training facilities developed at the Australian Centre for Medical Laser Technology (South Australia) and the Australian Laser Institute (Queensland).

The laser types and applications addressed in this Guide are current at the time of writing. Given the rapid development in the field, efforts will be made to revise the Standard as the technology and its applications change.

In this Standard the Tables and Figures are numbered in accordance with the Clause in which they are first referenced.

Standards Australia acknowledges the contribution of the Australian Centre for Medical Laser Technology to this Standard.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is only for information and guidance.

CONTENTS

		Pa	ige
FORE	EWORD		6
SECT	TON 1 SCOPE AND GENERAL		
1.1	SCOPE		7
1.2	APPLICATION		7
1.3	REFERENCED DOCUMENTS		7
1.4	DEFINITIONS		7
SECT	TION 2 THE LASER AND ITS PROPERTIES		
2.1	INTRODUCTION		13
2.2	WHAT IS A LASER?		13
2.3	MODES OF OPERATION		13
2.4	PROPERTIES OF LASERS		15
2.5	DESCRIPTION OF THE LASER BEAM		15
SECT	TION 3 LASER DELIVERY SYSTEMS		
3.1	GENERAL		20
3.2	DIRECT DELIVERY		20
3.3	ARTICULATED ARM		20
3.4	HOLLOW FLEXIBLE WAVEGUIDE		21
3.5	FIBRE OPTIC		21
3.6	HANDPIECES AND APPLICATORS		23
SECT	TION 4 BIOLOGICAL EFFECTS		
4.1	LASER INTERACTIONS WITH TISSUE		26
4.2	THERMAL		26
4.3	PHOTOABLATIVE		28
4.4	ELECTROMECHANICAL (OR PHOTOMECHANICAL)		28
4.5	PHOTOCHEMICAL		29
4.6	BIOSTIMULATION		29
SECT	TION 5 HAZARDS		
5.1	INTRODUCTION		30
5.2	ORGANS AT RISK		30
5.3	PULSED LASERS		32
5.4	OPTICAL FIBRE BREAKAGES		32
5.5	FIRE		33
5.6	EXPLOSION		33
5.7	ELECTROCUTION		33
5.8	AIRBORNE CONTAMINANTS		33
5.9	DYE LASERS		33
5.10	FUMES AND VAPOURS		33
5.11	EQUIPMENT EXPLOSION		33
5.12	UNSHIELDED LASER FLASH LAMPS/OPTICAL CAVITY		33
5.13	HEATED SURFACES OR INSTRUMENTS		34
5.14	REFLECTIONS		34
