

Australian Standard™

**Industrial automation systems and
integration—Integration of industrial
data for exchange, access and sharing**

**Part 2: Integration and mapping
methodology**

This Australian Standard was prepared by Committee IT-006, Information Technology for Industrial Automation and Integration. It was approved on behalf of the Council of Standards Australia on 30 March 2004 and published on 3 June 2004.

The following are represented on Committee IT-006:

Association of Consulting Engineers Australia
Australian Electrical and Electronic Manufacturers Association
CSIRO Centre for Planning and Design
CSIRO Manufacturing & Infrastructure Technology
Department of Defence (Australia)
Institute of Instrumentation, Control and Automation Australia
Institution of Engineers Australia
Monash University
RMIT University
The University of Melbourne

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee IT-006, Information Technology for Industrial Automation and Integration.

This Standard is identical with, and has been reproduced from, ISO/TS 18876-2:2003, *Industrial automation systems and integration—Integration of industrial data for exchange, access and sharing, Part 2: Integration and mapping methodology*.

The objective of this Standard is to provide and establish an architecture, a methodology, and other specifications for integrating industrial data for exchange, access and sharing.

This Standard is Part 2 of AS ISO 18876—2004, *Industrial automation systems and integration—Integration of industrial data for exchange, access and sharing*, which is published in parts as follows:

Part 1: Architecture overview and description

Part 2: Integration and mapping methodology (this Standard)

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

As this Standard is reproduced from an international standard, the following applies:

- (a) Its number appears on the cover and title page while the international standard number appears only on the cover.
- (b) In the source text ‘this International Standard’ should read ‘this Australian Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

| <i>Reference to International Standard</i> | <i>Australian Standard</i> |
|--|---|
| ISO | AS |
| 10303-1 Industrial automation systems and integration—Product data representation and exchange—Part 1: Overview and fundamental principles | 10303.1 Industrial automation systems and integration—Product data representation and exchange, Part 1: Overview and fundamental principles |

CONTENTS

| | <i>Page</i> |
|---|-------------|
| 1 Scope | 1 |
| 2 Normative references | 2 |
| 3 Terms, definitions, and abbreviations | 2 |
| 3.1 Terms and definitions | 2 |
| 3.2 Abbreviations | 6 |
| 4 Usage scenarios | 6 |
| 4.1 Integrating application models | 6 |
| 4.2 Integrating application models with an integration model | 7 |
| 4.3 Defining an application model and its mapping to an integration model | 9 |
| 4.4 Integrating an application model with two or more integration models | 10 |
| 4.5 Improving an integration model | 11 |
| 5 Methods for integrating application models | 12 |
| 5.1 Analysis of the requirements | 13 |
| 5.1.1 Pre-conditions | 13 |
| 5.1.2 Method description | 13 |
| 5.1.3 Post-conditions | 15 |
| 5.2 Defining and extending the integration model | 15 |
| 5.2.1 Pre-conditions | 16 |
| 5.2.2 Method description | 16 |
| 5.2.3 Post-conditions | 18 |
| 5.3 Identifying a subset of the integration model | 19 |
| 5.4 Mapping between the application model and the identified integration model subset | 19 |
| 5.4.1 Pre-conditions | 20 |
| 5.4.2 Method description | 21 |
| 5.4.3 Post-conditions | 22 |
| Annex A (normative) Information object registration | 23 |
| Annex B (informative) Description of the integration process | 24 |
| Annex C (informative) Checklist for integration and mapping processes | 32 |
| Annex D (informative) Technical discussions | 38 |
| Bibliography | 41 |
| Index | 43 |

Figures

| | |
|--|----|
| Figure 1 — Creating an integration model that integrates two application models | 7 |
| Figure 2 — Integrating an application model with an existing integration model | 8 |
| Figure 3 — Creating an application model and its mapping to an integration model | 9 |
| Figure 4 — Integrating an application model with more than one integration model | 10 |
| Figure 5 — Improving an integration model | 11 |
| Figure 6 — Alternative mappings to an improved integration model | 12 |
| Figure 7 — Analysis of application model | 14 |
| Figure 8 — Creating a new integration model | 17 |
| Figure 9 — Extending the integration model | 17 |
| Figure 10 — Identifying a subset of the integration model | 19 |
| Figure 11 — Mapping between the application model and the integration model subset | 21 |
| Figure B-1 — Integrate application model (A-0) | 24 |
