

Australian Standard[®]

Fire hazard testing

**Part 9.2: Surface spread of flame—
Summary and relevance of test methods**

This Australian Standard® was prepared by Committee EL-053, Fire hazard testing—
Electrotechnical equipment. It was approved on behalf of the Council of Standards Australia
on 23 May 2006.

This Standard was published on 28 June 2006.

The following are represented on Committee EL-053:

- Australian Electrical and Electronic Manufacturers Association
 - Australian Information Industry Association
 - Electrical Compliance Testing Association
 - Electrical Regulatory Authorities Council
 - Energy Networks Association
-

This Standard was issued in draft form for comment as DR 06193.

Standards Australia wishes to acknowledge the participation of the expert individuals that
contributed to the development of this Standard through their representation on the
Committee and through public comment period.

Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and
systems. To maintain their currency, all Standards are periodically reviewed, and new editions
are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are
using a current Standard, which should include any amendments that may have been
published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can
be found by visiting **www.standards.org.au**

Standards Australia welcomes suggestions for improvements, and encourages readers to
notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at
mail@standards.org.au, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee EL-053, Fire hazard testing—Electrotechnical equipment.

The objective of this series of standards is to provide the electrotechnology industry and standards writing committees with a series of standards which give guidance on assessing the fire hazard of electrotechnical products.

This Standard is identical with, and has been reproduced from IEC/TS 60695-9-2, Ed 2.0 (2005), *Fire hazard testing - Part 9-2: Surface spread of flame - Summary and relevance of test methods*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘IEC/TS 60695-9-2’ should read ‘AS 60695.9.2’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.
- (d) Any French text on figures should be ignored.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

Any International Standard referenced should be replaced by an equivalent Australian Standard where one is available. The availability of equivalent Australian Standards can be determined either from the Standards Web Shop at www.standards.com.au or from the annual printed catalogue of Australian Standards.

CONTENTS

	<i>Page</i>
INTRODUCTION.....	iv
1 Scope	1
2 Normative references.....	1
3 Terms and definitions.....	2
4 Summary of published test methods.....	5
4.1 Small-scale and intermediate-scale burning tests.....	5
4.2 Large-scale burning tests.....	10
Annex A (informative) Repeatability and reproducibility data – ISO 5658-2.....	16
Annex B (informative) Repeatability and reproducibility data – ISO 5658-4.....	17
Annex C (informative) Repeatability and reproducibility data – NFPA 262	18
Table 1 – Summary and comparison of IEC 60332 vertical ladder test methods [10]	12
Table 2 – Summary and comparison of non-IEC vertical ladder test methods	13
Table A.1 – Interlaboratory test data for ISO 5658-2.....	16
Table B.1 – Reproducibility and repeatability data for ISO 5658-4	17
Table C.1 – Repeatability and reproducibility data for NFPA 262	18
