**Telecontrol equipment and systems**

**Part 5.1: Transmission protocols—  
Transmission frame formats**

---

[IEC title: Telecontrol equipment and systems, Part 5: Transmission protocols—Section One—Transmission frame formats]

This Australian Standard was prepared by Committee IT/24, Supervisory Control and Data Acquisition. It was approved on behalf of the Council of Standards Australia on 5 January 1998 and published on 5 April 1998.

---

The following interests are represented on Committee IT/24:

Association of Consulting Engineers Australia  
Australasian Railway Association  
Australian Communications Authority  
Australian Electrical and Electronic Manufacturers Association  
Australian Fire Authorities Council  
Australian Gas Association  
Australian Pipeline Industry Association  
Australian Security Industry Association  
AUSTROADS  
CIGRE AP35  
Electricity Supply Association of Australia  
Fire Protection Association of Australia  
Institution of Engineers Australia  
Telstra Corporation  
Water Services Association of Australia

---

**Review of Australian Standards.** *To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

*Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.*

*Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.*

---

*This Standard was issued in draft form for comment as DR 97151.*

## PREFACE

This Standard was prepared by the Standards Australia Committee IT/24, Supervisory Control and Data Acquisition.

The Standard is identical with and has been reproduced from IEC 60870-5-1:1990, *Telecontrol equipment and systems, Part 5: Transmission protocols, Section One—Transmission frame formats*.

IEC has decided to apply a new numbering system, the 60000 series, to all its existing and future publications, including amendments to existing Standards. As a consequence, IEC has modified the bibliographic references in its databases to accord with the new numbering system. All IEC publications issued since the beginning of 1997 will carry references in terms of the 60000 series numbering. Publications printed earlier than 1997 will continue to carry the old series of numbers. For example, a reference to the IEC 60870 series of Standards will be to IEC 870 if the current edition of the Standard was printed prior to 1997.

This Standard is identical with a pre-1997 document therefore it uses the old series of numbers.

The objective of this Standard is to provide manufacturers and users of telecontrol equipment and systems with a specification of the basic requirements for services to be provided by the link and physical layers in order to achieve system interoperability within Australia.

As this Standard is reproduced from an international Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text 'this International Standard' should read 'this Australian Standard'.
- (c) A full point substitutes for a comma when referring to a decimal marker.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

## CONTENTS

	<i>Page</i>
INTRODUCTION .....	1
 Clause	
1. Scope .....	3
2. Object .....	3
3. Requirements for data transmission in telecontrol systems .....	3
3.1 High data integrity and data consistency .....	3
3.2 Short telecontrol transfer time .....	4
3.3 Support of bit oriented (code transparent) data transmission .....	4
4. Quantified rating of data integrity .....	4
4.1 Quantitative requirements for data integrity in telecontrol systems .....	5
5. Quantified rating of transmission efficiency .....	7
6. Transmission protocol specifications .....	8
6.1 Physical layer .....	8
6.2 Link layer .....	9
6.2.1 Link service classes provided .....	10
6.2.2 Dialogue procedures .....	11
6.2.3 Standard frame synchronization .....	12
6.2.4 Standard frame formats .....	12
6.2.5 Synchronization in transmission channels using switched carrier frequency .....	22
6.2.6 Main application fields of the defined format classes .....	23
6.2.7 Use of HDLC (High level data link control)-protocols .....	23
APPENDIX A - Effect of signal quality supervision on transmission efficiency and data integrity .....	24
APPENDIX B - Quantitative ratings of data integrity and transmission efficiency .....	28
