

Australian/New Zealand Standard™

**Coaxial cable and optical fibre systems  
for the RF distribution of analog and  
digital television and sound signals in  
single and multiple dwelling  
installations**

## **AS/NZS 1367:2007**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee CT-002, Broadcasting and Related Services. It was approved on behalf of the Council of Standards Australia on 5 September 2007 and on behalf of the Council of Standards New Zealand on 14 September 2007.

This Standard was published on 31 October 2007.

---

The following are represented on Committee CT-002:

Australian Broadcasting Corporation  
Australian Chamber of Commerce and Industry  
Australian Communications and Media Authority  
Australian Electrical and Electronic Manufacturers Association  
Australian Information Industry Association  
Australian Subscription Television and Radio Association  
Broadcast Australia  
Commercial Radio Australia  
Community Broadcasting Association of Australia  
Consumer Electronics Suppliers Association  
Engineers Australia  
Free TV Australia  
Ministry of Economic Development, New Zealand  
SingTel Optus  
Special Broadcasting Service  
Television New Zealand

Additional Interests:

Austar Entertainment, Australia  
BTC Australia  
Consultants  
FOXTEL Management  
Hills Industries, Australia  
Matchmaster Communications  
Modern Antenna Systems  
Network Ten  
Standard Communications, Australia  
Seven Network (Operations)

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at [www.standards.com.au](http://www.standards.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee CT-002, Broadcasting and Related Services, to supersede AS/NZS 1367:2000, *Coaxial cable systems for the distribution of analog television and sound signals in single and multiple unit installations*.

The objective of this Standard is to provide specifications and requirements for the cabling of range of premises and buildings generally referred to in this Standard as dwellings, for distribution of analog and digital services such as free-to-air TV and sound, subscription or pay TV, or in-house video systems via RF distribution. Such distributed services may include an interactive path.

A further objective of this Standard is to provide building owners, managers, architects, consultants, designers, manufacturers, installers, maintainers, service providers and users with requirements to meet user and service provider expectations, including performance criteria, for existing and foreseeable future services.

This Standard specifies the required equipment and system performance to meet safety, EMC and quality of service requirements of the end user or consumer.

This revision of AS/NZS 1367:2000 reflects the changes in the transmission formats such as the introduction of Free To Air (FTA) digital terrestrial television broadcasts using DVB-T and Cable systems introducing digital DVB-C plus advances in DVB-S equipment and systems. The following additions and revisions are included.

### **Transmission medium and major equipment type additions:**

- Optical
- DVB-T
- DVB-C
- T-DAB
- Multiswitches
- Diplexers
- Transmodulators (TDT) for DVB-S conversion to DVB-C

### **Specification and text revisions:**

- Satellite IF bandwidth extension to 2150 MHz
- System outlet level revisions and expansion
- Signal quality revisions and expansion
- Maximum level capability revisions and expansion
- Return loss revisions
- Safety requirements revisions
- EMC revisions for clarity
- Addition of Coaxial Cable specifications
- Addition of F-type Connector informative revisions
- Addition of a grade choice in specifications

- Removal of *Methods of Measurement* Appendix. This change is intended to encourage reliance upon compliant test equipment, which is now readily available, rather than special methods of measurement or test procedures. Common test structures rely upon direct reference to CENELEC/IEC or ETSI or ANSI/SCTE test procedures.
- Supporting explanatory text
- Impulse noise advice inclusions
- DVB-T multipath, echo and SFN briefs
- Device labelling requirements
- Glossary revision and expansion
- Revision of symbols
- Revision of diagrams, drawings and schematics

Statements expressed in mandatory terms in notes to tables are deemed to be requirements of this Standard.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.
