AS/NZS 60702.1:2005 IEC 60702-1, Ed. 3 (2002)

Australian/New Zealand Standard<sup>™</sup>

Mineral insulated cables and their terminations with a rated voltage not exceeding 750 V

Part 1: Cables

#### AS/NZS 60702.1:2005

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-003, Electric Wires and Cables. It was approved on behalf of the Council of Standards Australia on 28 October 2005 and on behalf of the Council of Standards New Zealand on 4 November 2005.

This Standard was published on 16 November 2005.

The following are represented on Committee EL-003:

Australasian Railway Association Australian Electrical and Electronic Manufacturers Association Australian Industry Group Canterbury Manufacturers Association New Zealand Department of Defence (Australia) Department of Primary Industries, Mine Safety (NSW) Electrical Contractors Association of New Zealand **Electrical Regulatory Authorities Council Energy Networks Association Engineers** Australia Ministry of Economic Development (New Zealand)

#### Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 05340.

## Australian/New Zealand Standard<sup>™</sup>

# Mineral insulated cables and their terminations with a rated voltage not exceeding 750 V

## Part 1: Cables

Originated in Australia as AS C351.1—1963. Previous edition AS/NZS 3187:1995. Jointly revised and redesignated as AS/NZS 60702.1:2005.

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-003, Electric Wires and Cables to supersede AS/NZS 3187:1995, *Approval and test specification—Mineral-insulated metal-sheathed cables.* 

The objective of this Standard is to specify the construction dimensions and tests for mineral-insulated metal-sheathed cables with rated voltages of 500 V and 750 V.

This Standard is identical with, and has been reproduced from IEC 60702-1, Ed. 3 (2002), *Mineral insulated cables and their terminations with a rated voltage not exceeding 750 V, Part 1: Cables.* 

Variations to IEC 60702-1, Ed. 3 (2002) are indicated at the appropriate places throughout this standard. Strikethrough (example) identifies IEC text, tables and figures which, for the purposes of this Australian/New Zealand Standard, are deleted. Where text, tables or figures are added, each is set in its proper place and identified by shading (example). Added figures are not themselves shaded, but are identified by a shaded border.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text IEC 60702-1 should read AS/NZS 60702.1.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

11.1 General.511.2 Conductor resistance511.3 Insulation resistance611.4 Integrity of insulation and copper sheath611.5 Spark test on outer covering611.6 Diameter and ovality over copper sheath712 Sample tests712.1 General.712.2 Voltage test712.3 Thickness of outer covering8	11	1 Routine tests	
11.2 Conductor resistance511.3 Insulation resistance611.4 Integrity of insulation and copper sheath611.5 Spark test on outer covering611.6 Diameter and ovality over copper sheath712 Sample tests712.1 General712.2 Voltage test712.3 Thickness of outer covering8		11.1	General5
11.3 Insulation resistance611.4 Integrity of insulation and copper sheath611.5 Spark test on outer covering611.6 Diameter and ovality over copper sheath712 Sample tests712.1 General712.2 Voltage test712.3 Thickness of outer covering8		11.2	Conductor resistance
11.4 Integrity of insulation and copper sheath   6     11.5 Spark test on outer covering   6     11.6 Diameter and ovality over copper sheath   7     12 Sample tests   7     12.1 General   7     12.2 Voltage test   7     12.3 Thickness of outer covering   8		11.3	Insulation resistance
11.5   Spark test on outer covering   6     11.6   Diameter and ovality over copper sheath   7     12   Sample tests   7     12.1   General   7     12.2   Voltage test   7     12.3   Thickness of outer covering   8		11.4	Integrity of insulation and copper sheath
11.6 Diameter and ovality over copper sheath   7     12 Sample tests   7     12.1 General   7     12.2 Voltage test   7     12.3 Thickness of outer covering   8     12.4 Elementation   7		11.5	Spark test on outer covering
12   Sample tests   7     12.1   General.   7     12.2   Voltage test   7     12.3   Thickness of outer covering   8     12.4   Flores extendence   7	4.0	11.6	Diameter and ovality over copper sheath
12.1 General	12	Sam	
12.2 Voltage test		12.1	General
12.3 Thickness of outer covering		12.2	Voltage test
		12.3	I nickness of outer covering
12.4 Flame relation of acidic and corrective gases		12.4	Figure relationation of acidic and corrective gases
12.6 Smoke emission 8		12.5	Smoke emission
13 Type tests	13	Type	o tests
13.1 General	10	13 1	General
13.2 Voltage test on completed cable		13.1	Voltage test on completed cable
13.3 Resistance of copper sheath		13.2	Resistance of copper sheath
13.4 Thickness of insulation		13.4	Thickness of insulation
13.5 Thickness of copper sheath		13.5	Thickness of copper sheath
