

Australian/New Zealand Standard™

Safety of laser products

**Part 2: Safety of optical fibre
communication systems (OFCS)**

AS/NZS IEC 60825.2:2011

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee SF-019, Personal Protection Against Laser Radiation. It was approved on behalf of the Council of Standards Australia on 20 October 2011 and on behalf of the Council of Standards New Zealand on 25 October 2011. This Standard was published on 5 December 2011.

The following are represented on Committee SF-019:

Australasian Faculty of Occupational & Environmental Medicine
Australian Dental Association
Defence Materiel Organisation (Australia)
Defence Science & Technology Organisation
Electronics Industry Association
National Radiation Laboratory New Zealand
Royal Australian and New Zealand College of Ophthalmologists
Safety Institute of Australia
Telecom New Zealand
Telstra Corporation
University of New South Wales at the Australian Defence Force Academy

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 60825.2.

AS/NZS IEC 60825.2:2011

Australian/New Zealand Standard™

Safety of laser products

Part 2: Safety of optical fibre communication systems (OFCS)

Originated as AS/NZS 2211.2:1997.
Previous edition AS/NZS 2211.2:2006.
Jointly revised and redesignated as AS/NZS IEC 60825.2:2011.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee SF-019, Personal Protection Against Laser Radiation, to supersede AS/NZS 2211.2:2006, Part 2: *Safety of optical fibre communication systems (OFCS)*.

The objectives of this Standard are as follows:

- (a) To protect people from optical radiation resulting from OFCS by introducing a system of hazard levels at accessible locations according to the degree of optical radiation hazard.
- (b) To lay down requirements for manufacturers, installation organizations, service organisations and operating organizations in order to establish procedures and supply information so that proper precautions can be adopted.
- (c) To ensure adequate warnings are provided to individuals regarding the hazards associated with OFCS through the use of signs, labels and instructions.
- (d) To reduce the possibility of injury by providing specific guidance for the safe operation and maintenance of optical fibre communication systems (OFCS).

This Standard is identical with, and has been reproduced from IEC 60825-2, Ed.3.2 (2010), Part 2: *Safety of laser products—Safety of optical fibre communication systems (OFCS)*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number appears on the cover and title page while the International Standard number appears only on the cover.
- (b) In the source text ‘This Part 2 of IEC 60825’ should read ‘This Australian/New Zealand Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian/New Zealand Standard</i>
IEC	AS/NZS IEC
60825 Safety of laser products	60825 Safety of laser products
60825-1 Part 1: Equipment classification and requirements	60825.1 Part 1: Equipment classification and requirements

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

IEC 60825 series of standards may have been adopted as AS/NZS standards as either AS/NZS IEC 60825, e.g. IEC/TR 60825-14 has been adopted as AS/NZS IEC 60825.14, or AS/NZS 2211, e.g. IEC 60825-4 has been adopted as AS/NZS 2211.4.

CONTENTS

1	Scope and object.....	6
2	Normative references.....	7
3	Terms and definitions.....	7
4	Requirements.....	10
4.1	General.....	10
4.2	Protective housing of OFCS	11
4.3	Fibre cables	11
4.4	Cable connectors	11
4.5	Automatic power reduction (APR) and restart pulses.....	12
4.6	Labelling or marking.....	13
4.7	Organizational requirements.....	18
4.8	Assessment of hazard level.....	19
4.9	Hazard level requirements by location type	20
	Annex A (informative) Rationale.....	21
	Annex B (informative) Summary of requirements at locations in OFCS	22
	Annex C (informative) Methods of hazard/safety analysis	23
	Annex D (informative) Application notes for the safe use of OFCS.....	24
	Annex E (informative) Guidance for service and maintenance	48
	Annex F (informative) Clarification of the meaning of “hazard level”.....	50
	Bibliography.....	52
	Figure D.1 – PON (passive optical network)-based system	33
	Figure D.2 – Simple laser drive circuit	35
	Figure D.3 – Risk graph example from IEC 61508-5 Clause D.5	39
	Figure D.4 – Graph of FIT rate and mean time to repair.....	42
	Table 1 – Marking in unrestricted locations	14
	Table 2 – Marking in Restricted Locations.....	15
	Table 3 – Marking in controlled locations	16
	Table D.1 – OFCS power limits for 11 μm single mode (SM) fibres and 0,18 numerical aperture multimode (MM) fibres (core diameter < 150 μm).....	26
	Table D.2 – Relation between the number of fibres in a ribbon fibre and the maximum permitted power (example).....	32
	Table D.3 – Identification of components and failure modes (example).....	36
	Table D.4 – Beta values (example).....	36
