## Technical Report

### Electromagnetic compatibility (EMC)

### Part 3.13: Limits—Assessment of emission limits for the connection of unbalanced installations to MV, HV and EHV power systems

### **TR IEC 61000.3.13:2012**

This Joint Australian/New Zealand Technical Report was prepared by Joint Technical Committee EL-034, Power Quality. It was approved on behalf of the Council of Standards Australia on 8 March 2012 and on behalf of the Council of Standards New Zealand on 12 March 2012.

This Technical Report was published on 26 March 2012.

---

The following are represented on Committee EL-034:

Australian Chamber of Commerce and Industry  
Australian Industry Group  
Australian Information Industry Association  
Bureau of Steel Manufacturers of Australia  
Consumer Electronics Suppliers Association  
Consumers Federation of Australia  
Electrical Regulatory Authorities Council  
Electricity Engineers Association, New Zealand  
Energy Networks Association  
Engineers Australia  
Lighting Council of Australia  
Ministry of Economic Development, New Zealand  
National Measurement Institute  
New Zealand Coordinating Committee on Power & Telecommunication Systems  
New Zealand Electric Fence Energiser Manufacturers Standards WG  
Telstra Corporation  
University of Canterbury, New Zealand  
University of Wollongong

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at [www.saiglobal.com.au](http://www.saiglobal.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

## PREFACE

This Technical Report was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-034, Power Quality.

The objective of this Technical Report is to provide guidance on principles that can be used to determine the requirements for the connection of three-phase installations causing voltage unbalance to MV, HV and EHV public power systems.

Users of this Technical Report are requested to consult National Electricity Rules or relevant jurisdictional legislation with regard to the limits of voltage unbalance.

This Technical Report is identical with, and has been reproduced from IEC/TR 61000-3-13, Ed 1.0 (2008), *Electromagnetic compatibility (EMC) Part 3-13: Limits—Assessment of emission limits for the connection of unbalanced installations to MV, HV and EHV power systems*. The IEC processes related to development and approval of a Technical Report are subject to a more moderate level of transparency and consensus than the processes related to developing and approving a normative Standard.

IEC/TR 61000-3-13, Ed 1.0 (2008) contained an error in Figure A.2. A Corrigendum was issued by IEC in April 2010, to rectify this error. The IEC Corrigendum 1 has been added at the end of the source text.

As this Technical Report is reproduced from an International Technical Report, the following applies:

- (a) Its number appears on the cover and title page while the International Technical Report number appears only on the cover.
- (b) In the source text ‘this part of IEC 61000’ should read ‘this part of TR IEC 61000’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

None of the normative references in the source document have been adopted as Australian or Australian/New Zealand Standards.

The term ‘informative’ has been used in this Standard to define the application of the appendix to which it applies. An ‘informative’ appendix is only for information and guidance.

## CONTENTS

	<i>Page</i>
1 Scope.....	6
2 Normative references .....	7
3 Terms and definitions .....	7
4 Basic EMC concepts related to voltage unbalance.....	12
4.1 Compatibility levels .....	12
4.2 Planning levels.....	13
4.2.1 Indicative values of planning levels.....	13
4.2.2 Assessment procedure for evaluation against planning levels.....	13
4.3 Illustration of EMC concepts.....	14
4.4 Emission levels .....	15
5 General principles .....	16
5.1 Stage 1: simplified evaluation of disturbance emission .....	17
5.2 Stage 2: emission limits relative to actual system characteristics.....	17
5.3 Stage 3: acceptance of higher emission levels on a conditional basis.....	17
5.4 Responsibilities .....	17
6 General guidelines for the assessment of emission levels .....	18
6.1 Point of evaluation.....	18
6.2 Definition of unbalance emission level.....	18
6.3 Assessment of emission levels from unbalanced installations.....	19
7 General summation law .....	19
8 Emission limits for unbalanced installations in MV systems .....	20
8.1 Stage 1: simplified evaluation of disturbance emission .....	20
8.2 Stage 2: emission limits relative to actual system characteristics.....	21
8.2.1 Global emission to be shared between the sources of unbalance .....	21
8.2.2 Individual emission limits .....	22
8.3 Stage 3: acceptance of higher emission levels on a conditional basis.....	24
8.4 Summary diagram of the evaluation procedure .....	25
9 Emission limits for unbalanced installations in HV or EHV systems.....	27
9.1 Stage 1: simplified evaluation of disturbance emission .....	27
9.2 Stage 2: emission limits relative to actual system characteristics.....	27
9.2.1 Assessment of the total available power .....	27
9.2.2 Individual emission limits .....	28
9.3 Stage 3: acceptance of higher emission levels on a conditional basis.....	30
Annex A (informative) Guidance for setting planning levels and emission limits .....	31
Annex B (informative) Calculation examples for determining emission limits .....	36
Annex C (informative) List of principal letter symbols, subscripts and symbols.....	37
Bibliography.....	39
