

## Australian/New Zealand Standard™

### **Marking of electrical and electronic products to indicate compliance with regulations**

### **Part 2: Specific requirements for electrical safety regulatory applications**

## **AS/NZS 4417.2:2009**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee QR-012, Conformance Marking to Regulatory Requirements. It was approved on behalf of the Council of Standards Australia on 14 October 2009 and on behalf of the Council of Standards New Zealand on 27 November 2009. This Standard was published on 11 December 2009.

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at [www.saiglobal.com.au](http://www.saiglobal.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee QR-012, Conformance Marking to Regulatory Requirements, to supersede AS/NZS 4417.2:2001 on publication.

The objective of this Standard is to provide the basis for a uniform Australian/New Zealand regulatory compliance marking scheme primarily for electrical and electronic products (which may be extended to other classes of products in future).

This part of the Standard deals with electrical safety regulations in Australia and New Zealand. These regulations are undergoing a transition both in the means by which compliance is demonstrated, and in terms of harmonisation between Australia and New Zealand. To date in Australia, marking of products with the number of a certificate has been the usual means of indicating compliance. It is understood that electrical regulators will continue to accept such marking for a period, in parallel with the use of the RCM.

A1 | This Standard incorporates Amendment No. 1 (March 2010). The changes required by the amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected. Where an application date other than immediate is applicable to an amendment the date of application (DOA) is indicated by the marginal bar against the part affected or by a footnote relating to the part affected.

AS/NZS 4417 is published in separate parts as follows:

- Part 1: General rules for use of the mark
- Part 2: Specific requirements for electrical safety regulatory applications
- Part 3: Specific requirements for electromagnetic compatibility regulatory applications
- Part 4: Specific requirements for radio apparatus regulatory applications

This revision updates aspects of the standard to make it more compatible with the current electrical safety regulatory requirements in Australia and New Zealand. It also includes consequential editorial changes and updates the regulatory definitions in Appendix B to align more closely with those enacted in legislation in Australia and New Zealand.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

Words in **bold** in the text are defined in clause 3.
