AS/NZS CISPR 16.2.3:2004 CISPR 16-2-3:2003

Australian/New Zealand Standard™

Specification for radio disturbance and immunity measuring apparatus and methods

Part 2.3: Methods of measurement of disturbances and immunity—Radiated disturbance measurements

AS/NZS CISPR 16.2.3:2004

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 24 March 2004 and on behalf of the Council of Standards New Zealand on 16 April 2004. It was published on 2 June 2004.

The following are represented on Committee TE-003:

Australian Broadcasting Authority Australian Broadcasting Corporation Australian Chamber of Commerce and Industry Australian Communications Authority Australian Electrical and Electronic Manufacturers Association Australian Information Industry Association CSIRO Telecommunications and Industrial Physics Commercial Television Australia Department of Defence (Australia) Electrical Compliance Testing Association Institution of Engineers Australia Ministry of Economic Development (New Zealand) SingTel Optus Pty Society of Automotive Engineers - Australasia Telstra Corporation University of Western Australia Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 04090.

Australian/New Zealand Standard[™]

Specification for radio disturbance and immunity measuring apparatus and methods

Part 2.3: Methods of measurement of disturbances and immunity—Radiated disturbance measurements

Originated as part of AS/NZS 1052.2:1999. Previous edition AS/NZS CISPR 16.2:2002. Revised and redesignated in part as AS/NZS CISPR 16.2.3:2004.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference to supersede AS/NZS CISPR 16.2:2002.

This Standard is identical with, and has been reproduced from, CISPR 16-2-3:2003, *Specification for radio disturbance and immunity measuring apparatus and methods*, Part 2-3: *Methods of measurement of disturbances and immunity*—Radiated disturbance measurements.

The objective of this Standard is to specify the methods of measurement of radiated disturbance phenomena in the frequency range 9 kHz to 18 GHz.

This Standard is Part 2.3 of AS/NZS CISPR 16.2, *Specification for radio disturbance and immunity measuring apparatus and methods*, which consists of the following:

Part 2.1: Methods of measurement of disturbances and immunity—Conducted disturbance measurements

Part 2.2: Methods of measurement of disturbances and immunity—Measurement of disturbance power

Part 2.3: Methods of measurement of disturbances and immunity—Radiated disturbance measurements (this Standard)

Part 2.4: Methods of measurement of disturbances and immunity-Immunity measurements

The terms 'normative' and 'informative' are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

As this Standard is reproduced from an international standard, the following applies:

- (a) Its number appears on the cover and title page while the international standard number appears only on the cover.
- (b) In the source text 'this International Standard' should read 'this Australian/New Zealand Standard'.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

Reference to International Standard
