AS/NZS 4129:2000 (Incorporating Amendments No. 1, 2 and 3)

Australian/New Zealand Standard™

Fittings for polyethylene (PE) pipes for pressure applications

AS/NZS 4129:2000

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee PL-006, Polyolefin Pipe Systems. It was approved on behalf of the Council of Standards Australia on 21 January 2000 and on behalf of the Council of Standards New Zealand on 22 February 2000.

This Standard was published on 3 April 2000.

The following are represented on Committee PL-006:

Association of Rotational Moulders (Australasia) AUSTAP
Australian Association of Certification Bodies
Australian Chamber of Commerce and Industry
Australian Gas Association
CSIRO Building, Construction and Engineering
Institution of Engineers Australia
Irrigation Association of Australia
Local Government of New Zealand
Master Plumbers Australia
Master Plumbers, Gasfitters and Drainlayers NZ
New Zealand Water and Waste Association
Plastics Institute of New Zealand
Water Services Association of Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

AS/NZS 4129:2000

(Incorporating Amendments No. 1, 2 and 3)

Australian/New Zealand Standard™

Fittings for polyethylene (PE) pipes for pressure applications

Originated as AS 1460—1973.
Revised and redesignated as AS 1460.1—1989 and AS 1460.2—1989.
AS/NZS 4129(Int) first published 1997.
AS 1460.1—1989, AS 1460.2—1989 and AS/NZS 4129(Int):1997 jointly revised, amalgamated and redesignated as AS/NZS 4129:2000.
Reissued incorporating Amendment No. 1 (December 2001).
Reissued incorporating Amendment No. 2 (November 2002).
Reissued incorporating Amendment No. 3 (November 2005).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committees PL/6, Polyolefin Pipe Systems.

This Standard incorporates Amendment No. 1 (December 2001), Amendment No. 2 (November 2002) and Amendment 3 (November 2005). The changes required by the Amendments are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The fittings covered in this Standard are for use with polyethylene (PE) pipe specified in AS/NZS 4130, Polyethylene (PE) pipes for pressure applications and AS 2698.2, Plastics pipes and fittings for irrigation and rural applications, Part 2: Polyethylene rural pipe. AS 1460—1989, Fittings for use with polyethylene pipes, Part 1: Mechanical jointing fittings, and Part 2: Electrofusion fittings, are withdrawn.

This Standard follows the classification structure for pipes adopted by ISO (Renard 10 Series) excepting for Class Rural Mechanical Compression fittings.

This Standard is structured into the following four Sections:

Section 1 General requirements and test methods

Section 2 Mechanical compression joint fittings

Section 3 Electrofusion fittings

Section 4 Mechanical tapping saddles

Section 1 has adopted ISO test methods where possible. Sections 1 and 2 are largely based on ISO 14236, Mechanical joint compression fittings for use with polyethylene pressure pipes in water supply systems.

Section 3 is based largely on pr EN 12201-3, *Plastics piping system for water supply—Polyethylene (PE)* Part 3: *Fittings, performance criteria and test methods*.

Section 4 is based on ISO 13460, *Agricultural irrigation equipment—Plastics saddles for polyethylene pressure pipes*, with alterations making it applicable to all PE pressure ratings and to include metal tapping saddles.

The term 'normative' has been used in this Standard to define the application of the appendix to which it applies. A 'normative' appendix is an integral part of a Standard.
